Waldo Tobler bibliography Despite retirement in 1994, he continued to be involved with research for the remainder of his life. Most of his publications consist of peer-reviewed journals, without single-issue textbooks or monographs, and the quantity of publications is noted as being unremarkable compared to modern geographers. Many of his works are foundational to modern geography and cartography, and still frequently cited in modern publications, including the first paper on using computers in cartography, the establishment of analytical cartography, and coining Tobler's first and second laws of geography. "During his life, there were several book chapters dedicated to discussing him, and an entry in the twentieth-century volume Waldo Tobler's (November 16, 1930 – February 20, 2018) publications span between 1957 and 2017, with his most productive year being 1973. His work covered a wide range of topics, with many of his papers considered. Waldo Tobler Academic Archives

Ibn al-Haytham He was Ḥasan Ibn al-Haytham (Latinized as Alhazen; ; full name Abū ‘Alī al-Ḥasan ibn al-Ḥasan ibn al-Haytham ابن الهيثم ابن الحسن بن الهيثم; c. The works of Alhazen were frequently cited during the scientific revolution by Isaac Newton, Johannes Kepler, Christiaan Huygens, and Galileo Galilei. 965 – c. 1040) was a medieval mathematician, astronomer, and physicist of the Islamic Golden Age from present-day Iraq. Referred to as "the father of modern optics", he made significant contributions to the principles of optics and visual perception in particular. His most influential work is titled Kitāb al-Manāẓir (Arabic: كتاب المناظر, "Book of Optics"), written during 1011–1021, which survived in a Latin edition. motion into geometry. He formulated the Lambert quadrilateral, which Boris Abramovich Rozenfeld names the "Ibn al-Haytham–Lambert quadrilateral"

Hipparchus Besides geometry, Hipparchus also used arithmetic techniques developed by the Chaldeans Hipparchus (; Greek: Ἱππαρχος, Hípparkhos; c. 190 – c. 120 BC) was a Greek astronomer, geographer, and mathematician. He is known to have been a working astronomer between 162 and 127 BC. He is considered the founder of trigonometry, but is most famous for his incidental discovery of the precession of the equinoxes. Hipparchus was born in Nicaea, Bithynia, and probably died on the island of Rhodes, Greece. projection is found in Ptolemy's Planisphere (2nd century AD)

Ptolemy 'Mathematical Treatise'). The second is the Geography, which is a thorough discussion on maps and the geographic knowledge of the Greco-Roman world. The first was his astronomical treatise now known as the Almagest, originally entitled Mathēmatiké Syntaxis (Μαθηματικὴ Σύνταξις, Mathēmatiké Syntaxis, lit. theorem on distances in a cyclic quadrilateral, and its generalization, Ptolemy's inequality, to non-cyclic quadrilaterals Ptolemaic graphs, the graphs whose Claudius Ptolemy (; Ancient Greek: Πτολεμαῖος, Ptolemaios; Latin: Claudius Ptolemaeus; c. 100 – 160s/170s AD), better known mononymously as Ptolemy, was a Greco-Roman mathematician, astronomer, astrologer, geographer, and music theorist who wrote about a dozen scientific treatises, three of which were important to later Byzantine, Islamic, and Western European science. The third is the astrological treatise in which he attempted to adapt horoscopic astrology to the Aristotelian natural philosophy

Italians also contributed in theorizing civil law, scientific method (particularly in the fields of physics and astronomy), double-entry bookkeeping, mathematical algebra and analysis, classical and celestial mechanics. Often, things discovered for the first time... tech WMF b... March 14 > and a >

Golden ratio Expressed algebraically, for quantities $\displaystyle 36^\circ$, and darts, concave quadrilaterals with two interior angles of $\displaystyle 144^\circ$. In mathematics, two quantities are in the golden ratio if their ratio is the same as the ratio of their sum to the larger of the two quantities

Italian people – living in the Italic peninsula or abroad – have been throughout history the source of important inventions and

innovations in the fields of writing, calendar, mechanical and civil engineering, musical notation, celestial observation, perspective, warfare, long distance communication, storage and production of energy, modern medicine, polymerization and information technology. Run WPCleaner in the command line with a command such as: a 9fe2ca4092 policy 9fe2ca4092 Originally developed to model the physical world, geometry has applications in almost all sciences, and also in art, architecture, and other activities that are related to graphics. Geometry... 9fe2ca4092 + 9fe2ca4092 Equal squares can tile the plane edge-to-edge in the square tiling. Square tilings are ubiquitous in tiled floors and walls, graph paper, image pixels, and game boards. Square shapes are also often seen in building floor plans, origami paper, food servings, in graphic design and heraldry, and in instant photos... 9fe2ca4092 with 9fe2ca4092 b 9fe2ca4092

Square spherical geometry and hyperbolic geometry, space is curved and the internal angles of a convex quadrilateral never sum to 360° , so quadrilaterals with four In geometry, a square is a regular quadrilateral. Squares are special cases of rectangles, which have four equal angles, and of rhombuses, which have four equal sides. It has four straight sides of equal length and four equal angles. As with all rectangles, a square's angles are right angles (90 degrees, or $\pi/2$ radians), making adjacent sides perpendicular. The area of a square is the side length multiplied by itself, and so in algebra, multiplying a number by itself is called squaring 9fe2ca4092

Hipparchus is considered the greatest ancient astronomical observer and, by some, the greatest overall astronomer of antiquity. He was the first whose quantitative and accurate models for the motion of the Sun and Moon survive. For this he certainly made use of the observations and perhaps the mathematical techniques accumulated over centuries by the Babylonians and by Meton of Athens (fifth... 9fe2ca4092 a 9fe2ca4092 idea lab 9fe2ca4092 Centralized discussion 9fe2ca4092 Feedback on proposals on WMF communication and experimentation 9fe2ca4092

Geometry Until the 19th century, geometry was almost exclusively devoted to Euclidean geometry, which includes the notions of point, line, plane, distance, angle, surface, and curve, as fundamental concepts. A mathematician who works in the field of geometry is called a geometer. Khayyam and Nasir al-Din al-Tusi on quadrilaterals, including the Lambert quadrilateral and Saccheri quadrilateral, were part of a line of research on Geometry (from Ancient Greek γεωμετρία (geōmetría) 'land measurement'; from γῆ (gê) 'earth, land' and μέτρον (métron) 'a measure') is a branch of mathematics concerned with properties of space such as the distance, shape, size, and relative position of figures. Geometry is, along with arithmetic, one of the oldest branches of mathematics 9fe2ca4092
