Since 1851, compiled statistics support this view; White consistently wins slightly more often than Black, usually achieving a winning percentage between 52 and 56 percent. White's advantage is less significant in blitz games and games between lower-level players, and becomes greater as the level of play rises; however, raising the level of play also increases the percentage of draws. As an independent scholar, he wrote the masterpieces *Disquisitiones Arithmeticae* and *Theoria motus corporum coelestium*. Chess It is played on a square board consisting of 64 squares arranged in an 8×8 grid. The object of the game is to "checkmate" (threaten with inescapable capture) the enemy king. to require "thinking" for skillful play; a solution of this problem will force us either to admit the possibility of a mechanized thinking or to further Chess is a board game for two players. There are also several ways a game can end in a draw. It is an abstract strategy game that involves no hidden information and no elements of chance. An enemy piece may be captured (removed from the board) by moving one's own piece onto the square it occupies. The players, referred to as "White" and "Black", each control sixteen pieces: one king, one queen, two rooks, two bishops, two knights, and eight pawns, with each type of piece having a different pattern of movement

When discussing chess history from the 1850s onwards, commentators have debated whether Steinitz could be effectively considered the champion from an earlier time, perhaps as early as 1866. Steinitz lost his title to Emanuel Lasker in 1894, and lost a rematch in 1896–97. Statistical rating systems give Steinitz a rather low ranking among world champions, mainly because he took several long breaks from competitive play. However, an analysis based on one of these rating systems shows that he was one of the most dominant players in the history... The recorded history of chess goes back to at least the emergence of chaturanga—also thought to be an ancestor...

First-move advantage in chess This has been the consensus since at least 1889, when the first World Chess Champion, Wilhelm Steinitz, addressed the issue, although chess has not been solved. Black, bypasses the question of whether White has an opening advantage “by thinking in terms of the concrete nature of the dynamic imbalance on the board In chess, there is a consensus among players and theorists that the player who makes the first move (White) has an inherent advantage, albeit not one large enough to win with perfect play

Since the 2nd century, malicious allegations of Jewish guilt have become a recurring motif in antisemitic tropes, which take the form of libels, stereotypes or conspiracy theories. They typically present Jews as cruel, powerful or controlling, some of which also feature the denial or trivialization of historical atrocities against Jews. These tropes have led to pogroms, genocides, persecutions and systemic racism for Jews throughout history.

Antisemitic tropes mainly evolved in monotheistic societies, whose religions were derived from Judaism, many of which were traceable to Christianity's early days.... 133bb0af0c
