Haemolymph is the analogue of blood for most arthropods. An arthropod has an open circulatory system, with a body cavity called a haemocoel through which haemolymph circulates to the interior organs. Like their exteriors, the internal organs of arthropods are generally built of repeated segments. They have ladder-like nervous systems, with paired... 6e0e9bbfde

British Railways was formed on 1 January 1948 as a result of the Transport Act 1947, which nationalised the Big Four British railway companies along with some other (but not all) smaller railways. Profitability of the railways became a pressing concern during the 1950s, leading to multiple efforts to bolster performance, including some line closures. The 1955 Modernisation Plan formally directed a process of dieselisation and electrification... 6e0e9bbfde

Glucose In the liver about 150 g (5. 3 oz) of glycogen are stored, in skeletal muscle about 250 g Glucose is a sugar with the molecular formula C₆H₁₂O₆. It is the most abundant monosaccharide, a subcategory of carbohydrates. It is made from water and carbon dioxide during photosynthesis by plants and

most algae. gluconeogenesis occurs in the liver and kidney, but also in other cell types. It is used by plants to make cellulose, the most abundant carbohydrate in the world, for use in cell walls, and by all living organisms to make adenosine triphosphate (ATP), which is used by the cell as energy. Glucose is often abbreviated as Glc

In energy metabolism, glucose is the most important source of energy in all organisms. Glucose for metabolism is stored as a polymer, in plants mainly as amylose and amylopectin, and in animals as glycogen. Glucose circulates in the blood of animals as blood sugar. The naturally occurring form is d-glucose, while its stereoisomer l-glucose... Dogs have managed to adapt over thousands of years to survive on the meat and non-meat scraps and...

Arthropod transfer the sperm directly to the female. They possess an exoskeleton with a cuticle made of chitin, often mineralised with calcium carbonate, a body with differentiated (metameric) segments, and paired jointed appendages. However, most male terrestrial arthropods produce spermatophores, waterproof packets of sperm, which the females Arthropods (AR-thrə-pod) are invertebrates in the phylum Arthropoda. They form an extremely diverse group of up to ten million species. In order to keep growing, they must go through stages of moulting, a process by which they shed their exoskeleton to reveal a new one

Sea shanty stricter schedules. However, in recent, popular usage, the scope of its definition is sometimes expanded to admit a wider range of repertoire and characteristics, or to refer to a "maritime work song" in general. The practice of singing shanties eventually became ubiquitous internationally and throughout the era of wind-driven packet and clipper ships A sea shanty, shanty, chantey, or chanty () is a genre of traditional folk song that was once commonly sung as a work song to accompany rhythmical labor aboard large merchant sailing vessels. The term shanty most accurately refers to a specific style of work song belonging to this historical repertoire
