

Cervical Spine Surgery Current Trends And Challenges 2014 02 05

Spinal fusion is most commonly performed to relieve the... 07dd906d2d The parents of the affected individual are usually genetically normal. The incidence of the syndrome increases with the age of the mother, from less than 0.1% for 20-year-old mothers to 3% for those of age 45. It is believed to occur by chance, with no known behavioral activity or environmental factor that changes the probability. Three different genetic forms have been identified. The most common, trisomy 21, involves an extra copy of chromosome 21 in all cells. The extra chromosome is provided at conception... 07dd906d2d

Management of tuberculosis The Journal of Bone and Joint Surgery. A comparison between ambulant treatment and radical surgery—ten-year report". tuberculosis of the spine. British Volume Management of tuberculosis refers to techniques and procedures utilized for treating tuberculosis (TB), or simply a treatment plan for TB 07dd906d2d

Rheumatoid arthritis Pain and stiffness often worsen following rest. Most commonly, the wrist and hands are involved, with the same joints typically involved on both sides of the body. This may result in a low red blood cell count, inflammation around the lungs, and inflammation around the heart. involved are the small joints of the hands, feet and cervical spine, but larger joints like the shoulder and knee can also be involved. It typically results in warm, swollen, and painful joints. Often, symptoms come on gradually over weeks to months. Synovitis can lead Rheumatoid arthritis (RA) is a long-term autoimmune disorder that primarily affects joints. The disease may also affect other parts of the body, including skin, eyes, lungs, heart, nerves, and blood. Fever and low energy may also be present
07dd906d2d

In 2002, unintentional and intentional injuries were the fifth and seventh leading causes of deaths worldwide, accounting for 6.23% and 2.84% of all deaths. For research purposes... 07dd906d2d

Neuroblastoma adrenal glands but can also develop in the head, neck, chest, abdomen, or spine. Symptoms may include bone pain, a lump in the abdomen, neck, or chest, Neuroblastoma (NB) is a type of cancer that forms in certain types of nerve tissue. It most frequently starts from one of the adrenal glands but can also develop in the head,

neck, chest, abdomen, or spine. Symptoms may include bone pain, a lump in the abdomen, neck, or chest, or a painless bluish lump under the skin

While the cause of rheumatoid arthritis is not clear, it is believed to involve a combination of genetic and environmental factors. The underlying mechanism involves the... Recent years have seen increased contributions in the application of bioarchaeological methods in investigating past populations in many areas around the world. Human osteological studies in the early 20th century were mostly descriptive and often overlooked the synthesis of biological, archaeological and historical narratives. It is only in the 1970s that bioarchaeology gained traction in concurrence with a change in the methodological approaches occurring in biological anthropology. In the Eastern Mediterranean these trends are exemplified in the seminal work on...

Major trauma The initial assessment is critical, and involves a physical evaluation and also may include the use of imaging tools to determine the types of injuries accurately and to formulate a course of treatment. "Sixty-four-slice computed tomographic scanner to clear traumatic cervical spine injury: systematic review of the Major trauma is any injury that has the potential to cause

prolonged disability or death. There are many causes of major trauma, blunt and penetrating, including falls, motor vehicle collisions, stabbing wounds, and gunshot wounds. McCallum, J; Griesdale, DE (Apr 2014). Depending on the severity of injury, quickness of management, and transportation to an appropriate medical facility (called a trauma center) may be necessary to prevent loss of life or limb 07dd906d2d

Weekend effect Variations in the outcomes for patients treated for many acute and chronic conditions have been studied. However, Nandyala et al. 05-1. 23). The effects of the weekend on patient outcomes has been a concern since the late 1970s, and a 'weekend effect' is now well documented. 1. , in the following year, in a US study of 34,122 patients who had undergone cervical fusion for cervical spine trauma In healthcare, the weekend effect is the finding of a difference in mortality rate for patients admitted to hospital for treatment at the weekend compared to those admitted on a weekday. Although this is a controversial area, the balance of opinion is that the weekend (and bank holidays) have a deleterious effect on patient care (and specifically increase mortality)—based on the larger studies that have been carried out 07dd906d2d

About 33% of deaths from cancer are caused by

tobacco and alcohol consumption, obesity, lack of fruit and vegetables in diet and lack of exercise. Other factors include certain infections, exposure to ionizing radiation, and environmental pollutants. Infection with specific viruses, bacteria and parasites is an environmental factor causing approximately 16–18%... Latent tuberculosis or latent tuberculosis infection (LTBI) is treated with three to nine... The medical standard for active TB is a short course treatment involving a combination of isoniazid, rifampicin (also known as Rifampin), pyrazinamide, and ethambutol for the first two months. During this initial period, Isoniazid is taken alongside pyridoxal phosphate to obviate peripheral neuropathy. Isoniazid is then taken concurrently with rifampicin for the remaining four months of treatment (6-8 months for miliary tuberculosis). A patient is expected to be free from all living TB bacteria after six months of therapy in Pulmonary TB or 8-10 months in Miliary TB.

Down syndrome The condition is surgically corrected with spine surgery. seen on neurological exam. It is usually associated with developmental delays, mild to moderate intellectual disability, and characteristic physical features. Growth in height is slower, resulting in adults who tend to have short stature. Down syndrome or Down's syndrome, also known as trisomy 21, is a genetic disorder caused by the

presence of all or part of a third copy of
chromosome 21 07dd906d2d

Typically, neuroblastoma occurs due to a genetic mutation occurring in the first trimester of pregnancy. Rarely, it may be due to a mutation inherited. Environmental factors have not been found to be involved. Diagnosis is based on a tissue biopsy. Occasionally, it may be found in a baby by ultrasound during pregnancy. At diagnosis, the cancer has usually already spread. The cancer is divided into low-, intermediate-, and high-risk groups based on a child's age, cancer stage,... 07dd906d2d While the rates of the leading causes of death, cardiovascular disease, cancer and lung disease, are similar in women and men, women have different experiences. Lung cancer has overtaken all other types of cancer as the leading... 07dd906d2d

Near Eastern bioarchaeology Gregoricka and Jaime Ullinger from the Ohio State University examined the changes in spinal degenerative disease frequencies of the cervical vertebrae Near Eastern bioarchaeology covers the study of human skeletal remains from archaeological sites in Cyprus, Egypt, Levantine coast, Jordan, Turkey, Iran, Saudi Arabia, Qatar, Kuwait, Bahrain, United Arab Emirates, Oman, and Yemen 07dd906d2d

Cancer Trends in Molecular Medicine. Over 100 types of cancers affect humans. (March 2010). 1016/j. "Use of anti-VEGF adjuvant therapy in cancer: challenges and rationale". doi:10. These contrast with benign tumors, which do not spread. While these symptoms may indicate cancer, they can also have other causes. Possible signs and symptoms include a lump, abnormal bleeding, prolonged cough, unexplained weight loss, and a change in bowel movements. molmed Cancer is a group of diseases involving abnormal cell growth with the potential to invade or spread to other parts of the body. 16 (3): 122-32 07dd906d2d

Women's health These differences are further exacerbated in developing countries where women, whose health includes both their risks and experiences, are further disadvantaged. These challenges are included in the goals of the Office of Research on Women's Women's health is an example of population health, where health is defined by the World Health Organization (WHO) as "a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity". as obstetrical fistulae, sexually transmitted infections and cervical cancer. Often treated as simply women's reproductive health, many groups argue for a broader definition pertaining to the overall health of women, better expressed as "The health of women" 07dd906d2d

Spinal fusion the spine (cervical, thoracic, lumbar, or sacral) and prevents any movement between the fused vertebrae. Additional hardware (screws, plates, or cages) is often used to hold the bones in place while the graft fuses the two vertebrae together. There are many types of spinal fusion and each technique involves using bone grafting—either from the patient (autograft), donor (allograft), or artificial bone substitutes—to help the bones heal together. This procedure can be performed at any level in the spine (cervical, thoracic, lumbar, or sacral) and prevents any movement between the fused vertebrae. The placement of hardware can be guided by fluoroscopy, navigation systems, or robotics. There are many types of spinal fusion and each Spinal fusion, also called spondylodesis or spondylosyndesis, is a surgery performed by orthopaedic surgeons or neurosurgeons that joins two or more vertebrae 07dd906d2d
