Geographic information system In a broader sense, one may consider such a system also to include human users and support staff, procedures and workflows, the body of knowledge of relevant concepts and methods, and institutional organizations. The implementation of a GIS is often driven by jurisdictional (such as a city), purpose, or application requirements. integration platforms such as SAP. Much of this often happens within a spatial database; however, this is not essential to meet the definition of a GIS. Generally A geographic information system (GIS) consists of integrated

Oak wilt through the bark and releasing a fruity odor that attracts wildlife, including sap beetles, bark beetles, other insects, birds and animals, such as squirrels Oak wilt is a fungal disease caused by the organism *Bretziella fagacearum* that threatens *Quercus* spp. Moving firewood long distances can potentially transport diseases and invasive species. The disease is limited to the eastern half of the United States, Central Texas, and Southern Ontario. The pathogen penetrates xylem tissue, preventing water transport and causing disease symptoms. The disease is dispersed by insect vectors and to adjacent trees through underground root networks. First described in the 1940s in the Upper Mississippi River Valley. Symptoms generally consist of leaf discoloration, wilt, defoliation, and death. However, human spread is the most consequential dispersal method a9f8263935

Supply chain management Interconnected. APICS' certification is called Certified Supply Chain Professional, or CSCP, and ISCEA's certification is called the Certified Supply Chain Manager (CSCM) In commerce, supply chain management (SCM) deals with a system of procurement (purchasing raw materials/components), operations management, logistics and marketing channels, through which raw materials can be developed into finished products and delivered to their end customers. This can include the movement and storage of raw materials, work-in-process inventory, finished goods, and end to end order fulfilment from the point of origin to the point of consumption. A more narrow definition of supply chain management is the "design, planning, execution, control, and monitoring of supply chain activities with the objective of creating net value, building a competitive infrastructure, leveraging worldwide logistics, synchronising supply with demand and measuring performance globally" a9f8263935
