Lawn mower MTD's "Auto Drive", and toroidal, have various performance or perception problems A lawn mower (also known as a grass cutter or simply mower, also often spelled lawnmower) is a device utilizing one or more revolving blades (or a reel) to cut a grass surface to an even height. g. The height of the cut grass may be fixed by the mower's design but generally is adjustable by the operator, typically by a single master lever or by a mechanism on each of the machine's wheels. The most common self-contained power source for lawn mowers is a small 4-stroke (typically one-cylinder) internal combustion engine. alternatives, but these attempts, which include variable belt types, e. Smaller mowers often lack any form of self-propulsion. The blades may be powered by manual force, with wheels mechanically connected to the cutting blades so that the blades spin when the mower is pushed forward, or the machine may have a battery-powered or plug-in electric motor d9ff1a316d
