Android Debug Bridge For example, Android applications can be saved by the command backup to a file The Android Debug Bridge (commonly abbreviated as adb) is a programming tool used for the debugging of Android-based devices. Made available as open-source software under the Apache License by Google since 2007, its features include a shell and the possibility to make backups. The adb software is available for Windows, Linux and macOS. It has been misused by botnets and other malware, for which mitigations were developed such as RSA authentication and device whitelisting. The daemon on the Android device connects with the server on the host PC over USB or TCP, which connects to the client that is used by the end-user over TCP. logcat output, getting a Unix shell, and rebooting into Qualcomm EDL mode 39840f28f8
