The most common type of diesel fuel is a specific fractional distillate of petroleum fuel oil, but alternatives that are not derived from petroleum, such as biodiesel, biomass to liquid (BTL) or gas to liquid (GTL) diesel are increasingly being developed and adopted. To distinguish these types, petroleum-derived diesel is sometimes called petrodiesel in some academic circles. Diesel is a high-volume product of oil refineries... 7255754541

Engineering Modern engineering comprises many subfields which include designing and improving infrastructure, machinery,

Natural-gas processing Some of the substances which contaminate natural gas have economic value and are further processed or sold. ISBN 978-0-429-87715-5 Natural-gas processing is a range of industrial processes designed to purify raw natural gas by removing contaminants such as solids, water, carbon dioxide (CO₂), hydrogen sulfide (H₂S), mercury and higher molecular mass hydrocarbons (condensate) to produce pipeline quality dry natural gas for pipeline distribution and final use. Boca Raton, FL: CRC Press. Fundamentals of Natural Gas Processing, Third Edition. (2019). Parrish, William R. ; McCartney, Daniel G. p. Hydrocarbons that are liquid at ambient conditions: temperature and pressure (i. e. 165. , pentane and heavier) are called natural-gas condensate (sometimes also called natural gasoline or simply condensate) 7255754541

Council). 2014. Petroleum Vapor Intrusion: Fundamentals of Screening, Investigation, and Management. Washington Diesel fuel, also called diesel oil, heavy oil (historically) or simply diesel, is any liquid fuel specifically designed for use in a diesel engine, a type of internal combustion engine in which fuel ignition takes place without a spark as a result of compression of the inlet air and then injection of fuel. Therefore, diesel fuel needs good compression ignition characteristics. PVI-1 7255754541

They achieve pressure rise by adding energy to the continuous flow of fluid through the rotor/impeller. The equation in the next section shows this specific energy input. A substantial portion of this energy is kinetic which is converted to increased potential energy/static pressure by slowing the flow through a diffuser. The static pressure rise in the impeller may
