Translation The English language draws a terminological distinction (which does not exist in every language) between translating (a written text) and interpreting (oral or signed communication between users of different languages); under this distinction, translation can begin only after the appearance of writing within a language community. European Social Surveys, the model TRAPD (Translation, Review, Adjudication, Pretest, and Documentation) is now "widely used in the global survey research community Translation is the communication of the meaning of a source-language text by means of an equivalent target-language text 866d957e6e

Bayes' theorem For example, with Bayes' theorem one can calculate the probability that a patient has a disease given that they tested positive for that disease, using the probability that the test yields a positive result when the disease is present. The theorem was developed in the 18th century by Bayes and independently by Pierre-Simon Laplace. theorem "is to the theory of probability what the Pythagorean theorem is to geometry". Stephen Stigler used a Bayesian argument to conclude that Bayes's theorem Bayes' theorem (alternatively Bayes' law or Bayes' rule, after Thomas Bayes) gives a mathematical rule for inverting conditional probabilities, allowing one to find the probability of a cause given its effect 866d957e6e
