Friction can have dramatic consequences, as illustrated by the use of friction created by rubbing pieces of wood together to start a fire.

Another important consequence of many types of friction can be wear, which may lead to performance degradation or damage to components. It is known that frictional energy losses account for about 20% of the total energy expenditure of the world. c30292f395

Friction is the force resisting the relative motion of solid surfaces, fluid layers, and material elements sliding against each other. Engineering Mechanics: Statics. Types of friction include dry, fluid, lubricated, skin, and internal - an incomplete list. The study of the processes involved is called tribology, and has a history of more than 2000 years. 330 c30292f395
