

Development s In Infant Observation The Tavistock Model

Melanie Klein that infants recognize that their achievements, such as crawling and walking, give their parents joy. In one observation, Klein says that the infant wishes Melanie Klein (; German: [klaɪn]; née Reizes; 30 March 1882 – 22 September 1960) was an Austrian-British author and psychoanalyst known for her work in child analysis. In her theory, how the child resolves that split depends on the constitution of the child and the character of nurturing the

child experiences. She was the primary figure in the development of object relations theory. Klein's work primarily focused on the role of ambivalence and moral ambiguity in human development. The quality of resolution can inform the presence, absence, and/or type of distresses a person experiences later in life. Klein suggested that pre-verbal existential anxiety in infancy catalyzed the formation of the unconscious, which resulted in the unconscious splitting of the world into good and bad idealizations 1a5a496974

Tavistock and Portman NHS Foundation Trust The Trust specialises in talking therapies. The education and training department caters for 2,000 students a year from the United Kingdom and abroad. The Trust is based at the Tavistock Centre in Swiss Cottage. (2009) 'Esther

empirical case study method in psychoanalytic and psychotherapy training which was developed at the Tavistock Clinic in London by child psychoanalyst Esther Bick. In 1948 she collaborated with John Bowlby to develop the approach as part of psychotherapy training

Attachment theory Developed by psychiatrist and psychoanalyst John Bowlby (1907-90), the theory posits that infants need to form a close relationship with at least one primary caregiver to ensure their survival, and to develop healthy social and emotional functioning. Pivotal aspects of attachment theory include the observation that infants seek proximity to attachment figures, especially during stressful Attachment theory is a psychological and evolutionary framework,

Child Guidance It therefore predated the advent of child psychiatry as a medical specialism and of distinct child psychiatric departments as part of modern hospital settings. It began in the United States and after World War I spread rapidly to Europe, especially to Austria and England, though not to Scotland. It was the first child-centred institutional response to meet perceived child and youth behavioural and mental disorders. 32 Bowlby, J. (2009) 'Esther Bick's legacy of infant observation at the Tavistock - some reflections 60 years on', *Infant Observation*, 12(1), p. (1999) [1969] Child Guidance was both an evolving 20th-century social construct, sometimes called the Child Guidance Movement, and an influential network of multidisciplinary clinics set up to address the problems of childhood and adolescence
