PRECEDE-PROCEED model Green that can help health program planners, policy makers and other evaluators, analyze situations and design health programs efficiently. teaching of ecological and

participatory approaches in public health, which are the two cornerstones of the 'educational and ecological approach' of PRECEDE-PROCEED The PRECEDE-PROCEED model is a cost-benefit evaluation framework proposed in 1974 by Lawrence W. It guides planners through a process that starts with desired outcomes and then works backwards in the causal chain to identify a mix of strategies for achieving those objectives. It provides a comprehensive structure for assessing health and quality of life needs, and for designing, implementing and evaluating health promotion and other public health programs to meet those needs. A fundamental assumption of the model is the active participation. One purpose and guiding principle of the PRECEDE-PROCEED model is to direct initial attention to outcomes, rather than inputs f7e1694342

The theory of competitive heterogeneity seeks to explain why firms do not converge on a single best way of doing things as predicted by simple microeconomics. The resource-based view (RBV) contains one approach. After the 2000s capability theories have expanded RBV logic. Recently, more work that focuses on heterogeneity has been published in strategy journals. f7e1694342
