Epitaxy For most epitaxial growths, the new layer is usually crystalline and each crystallographic domain of the overlayer must have a well-defined orientation relative to the substrate crystal structure. Upper Saddle River: Epitaxy (prefix epi- means "on top of") is a type of crystal growth or material deposition in which new crystalline layers are formed with one or more well-defined orientations with respect to the crystalline seed layer. Jaeger, Richard C. "Film Deposition". For most technological applications, single. Introduction to Microelectronic Fabrication (2nd ed. The deposited crystalline film is called an epitaxial film or epitaxial layer. 1039/C2CP40800G. (2002). Epitaxy can involve single-crystal structures, although grain-to-grain epitaxy has been observed in granular films. The relative orientation(s) of the epitaxial layer to the seed layer is defined in terms of the orientation of the crystal lattice of each material. PMID 22751288 3fb68b49bb
