COM enables object use with only knowing its interface; not its internal implementation. The component implementer defines interfaces that are separate from the implementation. JScript is implemented as an Active Scripting engine. This means that it can be "plugged in" to OLE Automation applications that support Active Scripting, such as Internet Explorer, Active Server Pages, and Windows Script Host. It also means such applications can use multiple Active Scripting languages, e.g., JScript, VBScript or PerlScript. Support for multiple programming contexts is handled by relying on the object for aspects that would be challenging to implement as a facility...
