

Fish In A Tree

Barringtonia asiatica It is native to coastal habitats from Tanzania and Madagascar in the west to tropical Asia, northern Australia, and islands of the western Pacific Ocean. It was described by Wilhelm Sulpiz Kurz in 1875 and has a conservation status of least concern. It has been used by a number of traditional cultures as a fish poison. *asiatica*, known variously as fish poison tree, putat and beach *Barringtonia* among other names, is a species of plants in the brazil nut family *Lecythidaceae* *Barringtonia asiatica*, known variously as fish poison tree, putat and beach *Barringtonia* among other names, is a species of plants in the brazil nut family *Lecythidaceae* c745645fb3

Fish A fish is an aquatic, anamniotic, gill-bearing vertebrate animal with swimming fins and a hard skull, but lacking limbs with digits. In a break from the long tradition of grouping all fish into a single class ("Pisces"), modern phylogenetics views fish as a paraphyletic group. Fish can be grouped into the more basal jawless fish and the more common jawed fish, the latter including all living cartilaginous and bony fish, as well as the extinct placoderms and acanthodians. Fish can be grouped A fish is an aquatic, anamniotic, gill-bearing vertebrate animal with swimming fins and a hard skull, but lacking limbs with digits c745645fb3

Diversity of fish Although most fish species have probably been discovered and described, about 250 new Fish are very diverse animals and can be categorised in many ways. Fish are very diverse animals and can be categorised in many ways. Although most fish species have probably been discovered and described, about 250 new ones are still discovered every year. According to FishBase about 34,800 species of fish had been described as of February 2022, which is more than the combined total of all other vertebrate species: mammals, amphibians, reptiles and birds c745645fb3

Most fish are cold-blooded, their body temperature varying with the surrounding water, though some large, active swimmers like the white shark and tuna can maintain a higher core temperature. Many fish can communicate acoustically with each other, such as during courtship displays. The study of fish is known as ichthyology... c745645fb3 It was released on 6 October 2000 in Denmark, 10 August 2001 in the United Kingdom, and 5 September 2006 in the United States... c745645fb3

Walking fish Some other modes of non-standard fish locomotion A walking fish, or ambulatory fish, is a fish that is able to travel over land for extended periods of time. A walking fish, or ambulatory fish, is a fish that is able to travel over land for extended periods of time. Some other modes of non-standard fish locomotion include "walking" along the sea floor, for example, in

handfish or frogfish c745645fb3

Fish toxins in the family Lecythidaceae were used by Indigenous Australians as fish toxins. The process of documenting many fish toxins and their use is ongoing, with interest in potential uses from medicine, agriculture, and industry. *Careya arborea* in the family Lecythidaceae is a large deciduous tree with Fish toxins or fish stupefying plants have historically been used by many hunter gatherer cultures to stun fish, so they become easy to collect by hand. Some of these toxins paralyse fish, which can then be easily collected c745645fb3

Fish species diversity is roughly divided equally between marine (oceanic) and freshwater ecosystems. Coral reefs in the Indo-Pacific constitute the centre of diversity for marine fishes, whereas continental freshwater fishes are most diverse in large river basins of tropical rainforests, especially the Amazon, Congo, and Mekong basins. More than 5,600 fish species inhabit Neotropical freshwaters alone,... c745645fb3 The earliest jawed vertebrates probably developed during the late Ordovician period. They are first represented... c745645fb3

Osteichthyes The vast majority of extant fish are members of Osteichthyes, being an extremely diverse and abundant group consisting of 45 orders, over 435 families and 28,000 species. They can be contrasted with the Chondrichthyes (cartilaginous fish) and the extinct

placoderms and acanthodians, which have endoskeletons primarily composed of cartilage. published with phylogenetic trees that treat the Osteichthyes as a clade including tetrapods. Bony fish are characterized by a relatively stable pattern Osteichthyes (ost-ee-IK-theez; from Ancient Greek ὀστέον (ostéon) 'bone' and ἰχθύς (ikhthús) 'fish'), also known as osteichthyans or commonly referred to as the bony fish, is a diverse clade of vertebrate animals that have endoskeletons primarily composed of bone tissue c745645fb3

Help! I'm a Fish The film tells the story of three kids-Fly, his little sister Stella, and cousin Chuck-who turn into fish and must return to human form before 48 hours are up; otherwise, they will be stuck as fish forever. Help. I'm a Fish (Danish: Hjælp, jeg er en fisk; also known as A Fish Tale) is a 2000 animated science fantasy musical film directed by Stefan Fjeldmark Help. It stars the voices of Alan Rickman, Terry Jones, and a then-unknown Aaron Paul. They must also contend with a pilot fish who has taken the antidote for himself, which he has his own plans for. Brown. I'm a Fish (Danish: Hjælp, jeg er en fisk; also known as A Fish Tale) is a 2000 animated science fantasy musical film directed by Stefan Fjeldmark, Greg Manwaring, and Michael Hegner, and written by Fjeldmark, Karsten Kiilerich, John Stefan Olsen, and Tracy J c745645fb3

The group is divided into two main clades, the ray-finned fish (Actinopterygii, which makes up the vast majority of

extant fish) and the lobe-finned fish (Sarcopterygii, which gave rise... c745645fb3

Blakiston's fish owl Henry Seebohm named this bird after the English naturalist Thomas Blakiston, who collected the original specimen in Hakodate on Hokkaidō, Japan in 1883. Its habitat is riparian forest with large, old trees for nest sites near lakes, rivers, springs, and shoals that do not freeze in winter. It is native to China, Japan, and the Russian Far East. This species is a part of the family known as typical owls (Strigidae), which contains most species of owl. Blakiston's fish owl and three other piscivorous owls are placed with some eagle-owls in the genus *Ketupa*. Blakiston's fish owl (*Ketupa blakistoni*), the largest living species of owl, is a fish owl, a sub-group of eagle-owls that specialize in hunting in riparian areas. Blakiston's fish owl (*Ketupa blakistoni*), the largest living species of owl, is a fish owl, a sub-group of eagle-owls that specialize in hunting in riparian areas c745645fb3

Evolution of fish first fish lineages belong to the Agnatha, or jawless fish. Lampreys belong to the Cyclostomata, which includes the extant hagfish, and this group may have split early on from other agnathans. During the late Cambrian, eel-like jawless fish called Fish began evolving about 530 million years ago during the Cambrian explosion. During the late Cambrian, eel-like jawless fish called the conodonts, and small mostly armoured fish known as ostracoderms, first appeared. Most jawless fish

are now extinct; but the extant lampreys may approximate ancient pre-jawed fish. Early examples include Haikouichthys. The first fish lineages belong to the Agnatha, or jawless fish. Early examples include Haikouichthys. It was during this time that the early chordates developed the skull and the vertebral column, leading to the first craniates and vertebrates c745645fb3

Fish crow The fish crow (*Corvus ossifragus*) is a species of crow associated with wetland habitats in the eastern and southeastern United States. The fish crow was The fish crow (*Corvus ossifragus*) is a species of crow associated with wetland habitats in the eastern and southeastern United States c745645fb3
