This way, it is assessed what advantages and disadvantages they have and for what research goals they may be used. A method is a structured procedure for bringing about a certain goal, like acquiring knowledge or verifying knowledge claims. This normally involves various steps, like choosing a sample, collecting data from this sample, and interpreting the data. It includes evaluative aspects by comparing different methods. (1998). The study of methods concerns a detailed description and analysis of these processes. Seventh Edition. Examples. Boston MA: Pearson Education Inc.
