Prostaglandin EP4 receptor It is one of four identified EP receptors, the others being EP1, EP2, and EP3, all of which bind with and mediate cellular responses to PGE2 and also, but generally with lesser affinity and responsiveness, certain other prostanoids (see Prostaglandin receptors). EP4 protein is found in humans as measured by immunochemistry in pulmonary veins; kidney glomeruli and tunica media of kidney Prostaglandin E2 receptor 4 (EP4) is a prostaglandin receptor for prostaglandin E2 (PGE2) encoded by the PTGER4 gene in humans. EP4 has been implicated in various physiological and pathological responses in animal models and humans. dorsal root ganglions, and brain

Talk:16 β ,17 α -Epiestriol Natural science – a major branch of science that tries to explain, and predict, nature's phenomena based on empirical evidence. In natural science, hypothesis must be verified scientifically to be regarded as scientific theory. Validity, accuracy, and social mechanisms ensuring quality control, such as peer review and repeatability of findings, are amongst the criteria and methods used for this purpose. Natural

Structural Concepts In Immunology And Immunochemistry

science can be broken into 2 main branches: life science, and physical science. Each of these branches, and all of their sub-branches, are referred to as natural sciences.
