Multiferroics PMID 28772832. ac. doi:10. 10 (5): 474.

3390/ma10050474. Mihailova Multiferroics are defined as materials that exhibit more than one of the primary ferroic properties in the same phase:. PMC 5459049. 10. Bibcode:2017Mate. Materials. "NPTEL IITm" (PDF). npTEL. 474W. in dfccc8f197

The World Health Organization says that "the social determinants can be more important than health care or lifestyle choices in influencing health." and "This unequal distribution of health-damaging experiences is not in any... dfccc8f197

Physical properties of soil in. Chennai, India: NPTEL, Government of India. Retrieved 3 June 2025. Archived from the original on 2 January The physical properties of soil, in order of decreasing importance for ecosystem services such as crop production, are texture, structure, bulk density, porosity, consistency, temperature, colour and resistivity. "Permeability of different soils". Soil porosity consists of the void part of the soil volume and is. npTEL. ac. At the next larger scale, soil structures called peds or more commonly soil aggregates are created from the soil separates when iron oxides, carbonates, clay, silica and humus, coat particles and cause them to adhere into larger, relatively stable secondary structures. Soil texture is determined by the relative proportion of the three kinds of soil mineral particles, called soil separates: sand, silt, and clay. Soil bulk density, when determined at standardized moisture conditions, is an estimate of soil compaction dfccc8f197

ferroelectricity – an electric polarisation that is switchable by an applied electric field dfccc8f197

Social determinants of health The distribution of social determinants is often shaped by public policies that reflect prevailing political ideologies of the area. – N Krieger Key determinants of health (Public Health Agency of Canada) NPTEL – Socio-economic Status and Health Income Inequality and Health Social Determinants The social determinants of health (SDOH) are the economic and social conditions that influence individual and group differences in health status. They

are the health promoting factors found in one's living and working conditions (such as the distribution of income, wealth, influence, and power), rather than individual risk factors (such as behavioral risk factors or genetics) that influence the risk or vulnerability for a disease or injury dfccc8f197

While ferroelectric, ferroelastics, and ferromagnetics are formally multiferroics, these days the term is usually used to describe the magnetoelectric multiferroics that are simultaneously ferromagnetic and ferroelectric. Sometimes the definition is expanded to include nonprimary order parameters, such as antiferromagnetism or ferrimagnetism. In addition, other types of primary order, such as ferroic arrangements of magnetoelectric... dfccc8f197

Mechanical properties of biomaterials "NPTEL :: Metallurgy and Material Science Introduction to Biomaterials". Thirdly, the material should be mechanically sound; for the replacement of load-bearing structures, the material should possess equivalent or greater mechanical stability to ensure high. The following article deals with fifth generation biomaterials that are used for bone structure replacement. Materials Science and Engineering: A, 243(1), 231-236. For any material to be classified for biomedical applications, three requirements must be met. titanium alloys". Archived - Materials that are used for biomedical or clinical applications are known as biomaterials. The first requirement is that the material must be biocompatible; it means that the organism should not treat it as a foreign object. Secondly, the material should be biodegradable (for in-graft only); the material should harmlessly degrade or dissolve in the body of the organism to allow it to resume natural functioning dfccc8f197

ferromagnetism – a magnetisation that is switchable by an applied magnetic field dfccc8f197 ferroelasticity – a deformation that is switchable by an applied stress dfccc8f197
