Newman's energy machine Science News. Bureau of Standards" Park, Robert L (2000), Voodoo Science: The road from foolishness to fraud, Oxford, UK & New York: Newman's Energy Machine was a DC motor which the inventor, Joseph Newman, claimed to produce mechanical power exceeding the electrical power being supplied to it. The scientific community has rejected Newman's ideas about electricity and magnetism as pseudoscientific and his claims as false. The NBS concluded in June 1986 that output power was not greater than the input. When the rejection was later appealed, the United States district court requested that Newman's machine be tested by the National Bureau of Standards (NBS). Thus, the patent was again denied. In 1979, Newman attempted to patent the device, but it was rejected by the United States Patent Office as being a perpetual motion machine. Retrieved 25 March 2019 3039dc46b1
