Guillotine cutting A guillotine-cut (also called an edge-to-edge cut) is a straight bisecting line going from one edge of an existing rectangle to the opposite edge, similarly to a paper guillotine. small rectangular items of fixed dimensions from a given large rectangular sheet, using only guillotine-cuts. A guillotine-cut (also called an edge-to-edge Guillotine cutting is the process of producing small rectangular items of fixed dimensions from a given large rectangular sheet, using only guillotine-cuts

Wikipedia:Reference desk/Archives/Mathematics/2008 June 6 understanding this. So my answer sheet I have says the answer is $\frac{2x - 5}{2x + 1}$ but I'm not sure how to Mathematics desk

List of Christians in science and technology People in this list should have their Christianity as relevant to their notable activities or public life, and who have publicly identified themselves as Christians or as of a Christian denomination. (1906-1996): member of the Sisters of Mercy known for Sister Celine's polynomials. Antoinette Rodez Schiesler This is a list of Christians in science and technology. Her work was also important to WZ Theory

Pseudo-range multilateration There are many robust linear algebra methods that can solve for (x Pseudo-range multilateration, often simply multilateration (MLAT) when in context, is a technique for determining the position of an unknown point, such as a vehicle, based on measurement of biased times of flight (TOFs) of energy waves traveling between the vehicle and multiple stations at known locations. This will be a set of $n - 1$ inhomogeneous linear equations. n

The page you are currently viewing is an archive page. While you can leave answers for any questions shown below, please ask new questions on one of the current reference desk pages.
< May | June | Jul >> TOFs are biased by synchronization errors in the difference between times of arrival (TOA) and times of transmission (TOT): $\text{TOF} = \text{TOA} - \text{TOT}$. Pseudo-ranges (PRs) are TOFs multiplied by the wave propagation speed: $\text{PR} = \text{TOF} \cdot s$. In general, the stations' clocks are assumed synchronized but the vehicle's clock is desynchronized. In MLAT for surveillance, the waves are transmitted by the vehicle and received by the stations; the TOT is unique and unknown, while the TOAs are multiple and known. When... FEM is a general numerical method for solving partial differential equations in two- or three-space variables (i.e., some boundary value problems). There are also studies about using FEM to solve high-dimensional problems. To solve a problem, FEM subdivides a large system into smaller, simpler... AES is a variant of the Rijndael block cipher developed by two Belgian cryptographers, Joan Daemen and Vincent Rijmen, who submitted a proposal to NIST during the AES selection process. Rijndael is a family of ciphers with different key and block sizes. For AES, NIST selected three members of the Rijndael family, each with a block size of 128 bits, but three different key lengths: 128, 192 and 256 bits. AES has been adopted by the U.S. government. It supersedes the Data Encryption Standard (DES), which was published in 1977. The algorithm...

Ibn al-Haytham He could find the integral formula for any polynomial without having developed a general formula. 1040) was a medieval mathematician, astronomer, and physicist of the Islamic Golden Age from present-day Iraq. Alhazen also wrote a Treatise Ḥasan Ibn al-Haytham (Latinized as Alhazen; ; full name Abū 'Alī al-Ḥasan ibn al-Ḥasan ibn al-

Haytham الحسن بن الحسن بن الهيثم; أبو علي, c. the volume of a paraboloid. His most influential work is titled *Kitāb al-Manāẓir* (Arabic: كتاب المناظر, "Book of Optics"), written during 1011–1021, which survived in a Latin edition. The works of Alhazen were frequently cited during the scientific revolution by Isaac Newton, Johannes Kepler, Christiaan Huygens, and Galileo Galilei. Referred to as "the father of modern optics", he made significant contributions to the principles of optics and visual perception in particular. 965 – c 6acce4fa88

String theory In string theory, one of the many vibrational states of the string corresponds to the graviton, a quantum mechanical particle that carries the gravitational force. Thus, string theory is a theory of quantum gravity. For example, the Clebsch cubic illustrated on the right is an algebraic variety In physics, string theory is a theoretical framework in which the point-like particles of particle physics are replaced by one-dimensional objects called strings. On distance scales larger than the string scale, a string acts like a particle, with its mass, charge, and other properties determined by the vibrational state of the string. String theory describes how these strings propagate through space and interact with each other. called algebraic varieties which are defined by the vanishing of polynomials 6acce4fa88

String theory is a broad and varied subject that attempts to address a number of deep questions of fundamental physics. String theory has contributed a... 6acce4fa88 **Guillotine cutting** is particularly common in the glass industry. Glass sheets are scored along horizontal and vertical lines, and then broken along these lines to obtain smaller panels. It is also useful for cutting steel plates, cutting of wood sheets to make furniture, and cutting of cardboard into boxes. 6acce4fa88

Finite element method The method approximates the unknown function over the domain **Finite element method (FEM)** is a popular method for numerically solving differential equations arising in engineering and mathematical modeling. formulation of a boundary value problem finally results in a system of algebraic equations. Typical problem areas of interest include the traditional fields of structural analysis, heat transfer, fluid flow, mass transport, and electromagnetic potential. With high-speed supercomputers, better solutions can be achieved and are often required to solve the largest and most complex problems. Computers are usually used to perform the calculations required 6acce4fa88

Advanced Encryption Standard of polynomial of order x^7 $\{\displaystyle x^{\{7\}}\}$. National Institute of Standards and Technology (NIST) in 2001. Multiplication is modulo irreducible polynomial $x^8 + x^4 + x^3 + x + 1$ $\{\displaystyle$ The Advanced Encryption Standard (AES), also known by its original name Rijndael (Dutch pronunciation: ['rɛɪnda:l]), is a specification for the encryption of electronic data established by the U. S. Addition is simply XOR 6acce4fa88

Isaac Newton His book *Philosophiæ Naturalis Principia Mathematica* (Mathematical Principles of Natural Philosophy), first published in 1687, achieved the first great unification in physics and established classical mechanics. S. 20 March] 1727) was an English polymath active as a mathematician, physicist, astronomer, alchemist, theologian, and author. Newton contributed to and refined the scientific method, and his work is considered the most influential. Newton also made seminal contributions to optics, and shares credit with German mathematician Gottfried Wilhelm Leibniz for formulating infinitesimal calculus, though he developed calculus years before Leibniz. 25 December] 1643 – 31 March [O. Newton was a key figure in the Scientific Revolution and the Enlightenment that followed. Newton's identities, Newton's method, classified cubic plane curves (polynomials of degree three in two variables), is a founder of the theory of Cremona Sir Isaac Newton (4 January [O. S 6acce4fa88

There are various optimization problems related to guillotine cutting, such as: maximize the total area of the produced pieces, or their total value; minimize... 6acce4fa88

Glossary of artificial intelligence not depend on the machine's ability to give correct answers to questions, only how closely its answers resemble those a human would give. type

system In This glossary of artificial intelligence is a list of definitions of terms and concepts relevant to the study of artificial intelligence (AI), its subdisciplines, and related fields. Related glossaries include Glossary of computer science, Glossary of robotics, Glossary of machine vision, and Glossary of logic 6acce4fa88
