They are often used by writers to help find the best word to express an idea: 2ab7d90196

Randomness In this view, randomness is not haphazardness; it is a measure of uncertainty of an outcome. Noise consists of numerous transient disturbances, with a statistically randomized time distribution. For example, when throwing two dice, the outcome of any particular roll is unpredictable, but a sum of 7 will tend to occur twice as often as 4. A random sequence of events, symbols or steps often has no order and does not follow an intelligible pattern or combination. In communication theory, randomness in a signal is called In common usage, randomness is the apparent or actual lack of definite pattern or predictability in information. Individual random events are, by definition, unpredictable, but if there is a known probability distribution, the frequency of different outcomes over repeated events (or "trials") is predictable. Randomness applies to concepts of chance, probability, and information entropy 2ab7d90196

Wikiquote has quotations related to coincidence. com A coincidence is a remarkable concurrence of events or circumstances that have no apparent causal connection with one another 2ab7d90196

Ephebophilia It is not a psychiatric diagnosis. The term was originally used in the late 19th to mid-20th century. It is one of a number of sexual preferences across age groups subsumed under the technical term chronophilia. Ephebophilia strictly denotes the preference for mid-to-late adolescent sexual partners, not the mere presence of some level of sexual attraction. contrast to ephebophilia, "conceptually, hebephilia is a paraphilia, reflecting an atypical (statistically rare) sexual age interest in pubescent children" Ephebophilia is the primary sexual interest in mid-to-late adolescents, generally ages 15 to 19 and showing Tanner stages 4 to 5 of physical development 2ab7d90196
