Cutting stock problem In terms of computational complexity, the problem is an NP-hard problem reducible to the knapsack problem. It is an optimization problem in mathematics that arises from applications in industry. such solutions exist, each with 10 patterns and a waste of 0. The problem can be formulated as an integer linear programming problem. 401%, of which one such solution is shown below and in the picture: Cutting-stock problems can In operations research, the cutting-stock problem is the problem of cutting standard-sized pieces of stock material, such as paper rolls or sheet metal, into pieces of specified sizes while minimizing material wasted 162ac6c72e

and program library that allows multiple people to use the system at once. The systems were a major force in the early-to-mid 1970s and generated a large number of programs. HP maintained a database of contributed-programs and customers could order them on punched tape for a nominal fee. 162ac6c72e

Carbon accounting Corporations, cities and other groups use these techniques to help limit climate change. Organizations will often set an emissions baseline, create targets for reducing emissions, and track progress towards them. The accounting methods enable them to do this in a more consistent and transparent manner. It can also be used to track projects or actions to reduce emissions in sectors such as forestry or renewable energy. It Carbon accounting (or greenhouse gas accounting) is a framework of methods to measure and track how much greenhouse gas (GHG) an organization emits. Several versions were produced at Dartmouth, implemented by undergraduate students and operating as a compile and go system. The first version ran on 1 May 1964, and it was opened to general users in June. Upgrades followed, culminating in the seventh and final release in 1979. Dartmouth also introduced a dramatically updated version known as Structured BASIC (or SBASIC) in 1975,

Environmental full-cost accounting As definitions for "true" and "full" are inherently subjective, experts consider both terms problematic. It is one aspect of true cost accounting (TCA), along with Human capital and Social capital. Environmental full-cost accounting (EFCA) is a method of cost accounting that traces direct costs and allocates indirect costs by collecting and presenting information Environmental full-cost accounting (EFCA) is a method of cost accounting that traces direct costs and allocates indirect costs by collecting and presenting information about the possible environmental costs and benefits or advantages – in short, about the "triple bottom line" – for each proposed alternative 162ac6c72e

Since costs and advantages are usually considered in terms of environmental, economic and social impacts, full or true cost efforts are collectively called the "triple bottom line". Many standards now exist in this area including Ecological Footprint, eco-labels, and the International Council... 162ac6c72e

Vehicle routing problem " The problem first appeared, as the truck dispatching problem, in a paper by George Dantzig and John Ramser in 1959, in which it was applied to petrol deliveries. the most recent and efficient metaheuristics for vehicle routing problems reach solutions within 0. However, variants of the problem consider, e. Other objectives, such as minimising the number of vehicles. Often, the context is that of delivering goods located at a central depot to customers who have placed orders for such goods. The standard objective of the VRP is to minimise the total route cost. g, collection of solid waste and the transport of the elderly and the sick to and from health-care facilities. 5% or 1% of the optimum for problem instances counting The vehicle routing problem (VRP) is a combinatorial optimization and integer programming problem which

Problem of Apollonius no Apollonius problems with seven solutions. 262 BC – c. Apollonius of Perga (c. Three given circles generically have eight different circles that are tangent to them (Figure 2), a pair of solutions for each way to divide the three given circles in two subsets (there are 4 ways to divide a set of cardinality 3 in 2 parts). Alternative solutions based on the geometry of circles and spheres have been developed and used in higher In Euclidean plane geometry, Apollonius's problem is to construct circles that are tangent to three given circles in a plane (Figure 1). 190 BC) posed and solved this famous problem in his work Ἐπαφαί (Epaphaí, "Tangencies"); this work has been lost, but a 4th-century AD report of his results by Pappus of Alexandria has survived

Constraint satisfaction problem solution if it is consistent and complete; such an evaluation is said to solve the constraint satisfaction problem. Constraint satisfaction problems on Constraint satisfaction problems (CSPs) are mathematical questions defined as a set of objects whose state must satisfy a number of constraints or limitations. CSPs represent the entities in a problem as a homogeneous collection of finite constraints over variables, which is solved by constraint satisfaction methods. CSPs often exhibit high complexity, requiring a combination of heuristics and combinatorial search methods to be solved in a reasonable time. Constraint programming (CP) is the field of research that specifically focuses on tackling these kinds of problems. CSPs are the subject of research in both artificial intelligence and operations research, since the regularity in their formulation provides a common basis to analyze and solve problems of many seemingly unrelated families 162ac6c72e

Hilbert's problems Hilbert's problems are 23 problems in mathematics published by German mathematician David Hilbert in 1900. Earlier publications (in the original German) appeared in Archiv der Mathematik und Physik. They were all unsolved at the time, and several proved to be very influential for 20th-century mathematics. They were all unsolved at the time, and several Hilbert's problems are 23 problems in mathematics published by German mathematician David Hilbert in 1900. The complete list of 23 problems was published later, in English translation in 1902 by Mary Frances Winston Newson in the Bulletin of the American Mathematical Society. Hilbert presented ten of the problems (1, 2, 6, 7, 8, 13, 16, 19, 21, and 22) at the Paris conference of the International Congress of Mathematicians, speaking on August 8 at the Sorbonne 162ac6c72e
