Industrial control system material from the National Institute of Standards and Technology Guide to Industrial Control Systems (ICS) Security, SP800-82 Rev2, National Institute of Standards An industrial control system (ICS) is an electronic control system and associated instrumentation used for industrial process control. Control systems receive data from remote sensors measuring process variables (PVs), compare the collected data with desired setpoints (SPs), and derive command functions that are used to control a process through the final control elements (FCEs), such as control valves. Control systems can range in size from a few modular panel-mounted controllers to large interconnected
