A goto statement is included in a language, primarily, to provide access to the machine code jump instruction (a.k.a. branch or transfer), but due to potential problems with the use of jump semantics, languages have over time been augmented with other flow-control mechanisms intended to replace the need for and use of goto. Many modern languages do not include a goto statement at all. Many languages that do include a goto statement restrict its use in order to limit the problems that its use might incur. Further, as its use is generally considered a poor choice, software developers tend to avoid using it even when using a language that provides it. 05b6471665
