The face is flushed and the rash is red and blanching. Archived from the original Scarlet fever, also known as scarlatina, is an infectious disease caused by *Streptococcus pyogenes*, a Group A streptococcus (GAS). ISBN 978-0-323-77788-9. pp. On darker-pigmented skin the rash may be hard to discern. It most commonly affects children and young adolescents between five and 15 years of age. Zitelli and Davis's Atlas of Pediatric Physical Diagnosis (8th ed. The rash occurs as a result of capillary damage by exotoxins produced by *S.* It typically feels like sandpaper and the tongue may be red and bumpy.). 468-471 84a572b3b9

Actinomycosis The condition is likely to be a polymicrobial anaerobic infection. (via NCBI Bookshelf) Actinomycosis is a rare infectious bacterial disease caused by the gram-positive *Actinomyces* species. ISBN 978-0-9631172-1-2. Infection can also be caused by *Streptomyces somaliensis* and *Propionibacterium propionicus*. Univ of Texas Medical Branch. Actinomycosis in: Baron's Medical Microbiology (4th ed. Baron S; et al. The name refers to ray-like appearance of the organisms in the granules. About 70% of infections are due to either *Actinomyces israelii* or *A.*). (eds. gerencseriae.) 84a572b3b9

Bile 2017-03-31. Potter, Patricia (2013). ISBN 978-0-323-07933-4. p. After a human eats, this stored bile is discharged into the first section of the small intestine, known as the duodenum. Dickinson, Eric; Leser, Martin Bile (from Latin bilis), also known as gall, is a yellow-green fluid produced by the liver of most vertebrates that aids the digestion of lipids in the small intestine. Fundamentals of Nursing, 8th edition. A. In humans, bile is primarily composed

of water, is produced continuously by the liver, and is stored and concentrated in the gallbladder. 1000. Elsevier, Inc 84a572b3b9

H. capsulatum is found in soil, often associated with decaying bat guano or bird droppings. Humans may inhale infectious spores after disrupting the soil via excavation or construction. *H. capsulatum* has a one to two week incubation period within human lungs before symptoms arise. The disease is common among AIDS patients due to their immunosuppression. 84a572b3b9

Abscess Abscesses can also form internally on internal organs and after surgery. Signs and symptoms of abscesses include redness, pain, warmth, and swelling. The swelling may feel fluid-filled when pressed. Philadelphia, PA: Elsevier/Saunders. Rosen's emergency medicine: concepts and clinical practice (8th ed. ISBN 978-1-4557-0605-1.). The area of redness often extends beyond the swelling. Chapter 137. American An abscess is a collection of pus that has built up within the tissue of the body, usually caused by bacterial infection. pp. A cyst is related to an abscess, but it contains a material other than pus, and a cyst has a clearly defined wall. Carbuncles and boils are types of abscess that often involve hair follicles, with carbuncles being larger 84a572b3b9

Pathogenic bacteria By contrast, several thousand species are considered part of the gut flora, with a few hundred species present in each individual human's digestive tract. Most species of bacteria are harmless and many are beneficial but others can cause infectious diseases.). 843 ISBN 978-1-4160-2973-1 "erysipelas" at Dorland's Medical Dictionary "cellulitis" at Dorland's Medical Dictionary Pathogenic bacteria are bacteria that can cause disease. The number of these pathogenic species in humans is estimated to be fewer than a hundred. Pathology (8th ed. Dan M. Granoff Beginning in 2011, Granoff held the Clorox Foundation Endowed Chair and was director of the Center of Immunobiology and Vaccine Development at Children's Hospital Oakland Research Institute (now known as University of California San Francisco (UCSF) Benioff Children's Hospital Oakland). Granoff (born January 22, 1944) is an infectious disease physician-scientist who was named the 2014 Maurice Hilleman/Merck Laureate by the American Society for Microbiology for outstanding contributions to vaccine discovery and development. 708-717, doi:10 - Dan M. His work increased understanding of basic mechanisms of human immunity to encapsulated bacteria, and furthered development of vaccines against *Haemophilus influenzae* type B (Hib) and *Neisseria meningitidis* (also called the meningococcus). Most cases are caused by a viral infection. Strep throat, a bacterial infection, is
the cause in about 25% of children and 10% of adults. Uncommon causes
include other bacteria such as gonococcus, fungi, irritants such as smoke,
allergies, and gastroesophageal reflux disease. Specific testing is not
recommended in people who have clear symptoms of a viral infection...
