Google data centers information retrieval (IR) systems. Google dealt with the increasing query volume by increasing number of replicas of each shard and thus increasing number Google uses large data center facilities to provide their services, which combine large drives, computer nodes organized in aisles of racks, internal and external networking, environmental controls (mainly cooling and humidification control), and operations software (especially as concerns load balancing and fault tolerance) bfb6bb4733

LIGO Two additional, smaller gravity wave observatories are now operational in Japan (KAGRA) and Italy (Virgo). The two LIGO observatories. on the LIGO Voyager technology, including a similar LIGO-type L-shape geometry, but with 20 and 40 km arms. Initially, two large observatories were built in the United States with the aim of detecting gravitational waves by laser interferometry. It is currently planned to be on the surface The Laser Interferometer Gravitational-Wave Observatory (LIGO) is a large-scale physics experiment and observatory designed to detect cosmic gravitational waves and to develop gravitational-wave observations as an astronomical tool. Prior to LIGO, all data about the universe has come in the form of light and other forms of electromagnetic radiation, from limited direct exploration on relatively nearby Solar System objects such as the Moon, Mars, Venus, Jupiter and their moons, asteroids etc, and from high energy cosmic particles bfb6bb4733
