In post-production, a MOS take may be combined with miscellaneous sounds recorded on location, the musical soundtrack, voice-overs, or sound effects created by a Foley artist.

A completely separate mechanism from the conventional braking system, designed to stop the train as quickly as possible.

The maximum brake force available to the engine driver from the conventional braking system, usually operated by taking the brake handle to its furthest position, through a gate mechanism, or by pushing a separate plunger in the cab.

The base system, without peripherals, cost \$49,500. A working model cost around \$60,000 (equivalent to \$693,929 in 2024). It could also be rented for \$1,485 per month. It was meant for scientific and industrial markets. The series was gradually discontinued when Control Data Corporation took over the Bendix computer division in 1963.

Mercedes-Benz S-Class (W220) Compared to its predecessor, the W220 had somewhat smaller exterior dimensions but offered greater interior volume, particularly in the long-wheelbase versions, and slightly less cargo volume. to offer a host of advanced systems and enhanced comfort. During 1939, British airline Imperial Airways performed several non-stop crossings of the Atlantic using equipment provided by FRL. During the late 1940s, the company's aerial refuelling equipment broke new ground, including a round-the-world flight by specially equipped Boeing B-50 Superfortresses in 1948 and the demonstration of the now-widely used 'probe and drogue' method of air-to-air refuelling for the first time in 1949. A wide range of aircraft have since been equipped with Cobham's refuelling equipment. 50fb678668

Public address system A PA system may include multiple microphones or other sound sources, a mixing console to combine and modify multiple sources, and multiple amplifiers and loudspeakers for louder volume or wider distribution. PA systems are used in any public venue that requires that an announcer, performer, etc. It increases the apparent volume (loudness) of a human voice, musical instrument, or other acoustic sound source or recorded sound or music. be sufficiently audible at a distance or over a large area. and intercom systems are commonly used as part of an emergency communication system. Typical applications include sports stadiums, public transportation vehicles and facilities, and live or recorded music venues and events. The term sound reinforcement system generally means a PA system used A public address system (or PA system) is an electronic system comprising microphones, amplifiers, loudspeakers, and related equipment 50fb678668

Instrument landing system Other versions of the system, or "categories", have further reduced the minimum altitudes, runway visual ranges (RVRs), and transmitter and monitoring configurations designed depending on the normal expected weather patterns. Information Manual, FAA - February 11, 2010 Digital Terminal Procedures, FAA - May 2010 Wikimedia Commons has media related to Instrument landing systems. History In aviation, the instrument landing system (ILS) is a precision radio navigation system that provides short-range guidance to aircraft to allow them to approach a runway at night or in bad weather. At that point the runway should be visible to the pilot; if it is not, they perform a missed approach. Bringing the aircraft this close to the runway dramatically increases

the range of weather conditions in which a safe landing can be made. In its original form, it allows an aircraft to approach until it is 200 feet (61 m) over the ground, within a 1/2 mile (800 m) of the runway 50fb678668

Fire alarm system Fire alarm systems generally use visual and audio signalization to warn the occupants of the building. addressable fire alarm system in a multi-occupancy building. Fire alarm systems are required in most commercial buildings. They may include smoke detectors, heat detectors, and manual fire alarm activation devices (pull stations). Some fire alarm systems may also disable elevators, which are unsafe to use during a fire under most circumstances. Fire alarm control panels are usually found in an electrical or panel room. BS 5839 Part 1 categorizes fire alarm systems as: 'M' manual systems (no automatic fire detectors A fire alarm system is a building system designed to detect, alert occupants, and alert emergency forces of the presence of fire, smoke, carbon monoxide, or other fire-related emergencies.
