Metric space $\{\displaystyle \Omega(\log n)\}$. The distance is measured by a function called a metric or distance function. The tree metrics produced in this embedding dominate the original metrics, meaning that distances in the tree are greater In mathematics, a metric space is a set together with a notion of distance between its elements, usually called points. Metric spaces are a general setting for studying many of the concepts of mathematical analysis and geometry 5feddeeddd

The most familiar example of a metric space is 3-dimensional Euclidean space with its usual notion of distance. Other well-known examples are a sphere equipped with the angular distance and the hyperbolic plane. A metric may correspond to a metaphorical, rather than physical, notion of distance: for example, the set of 100-character Unicode strings can be equipped with the Hamming distance, which measures the number of characters that need to be changed to get from one string to another... 5feddeeddd
