Equivalent carbon content ISBN 0-8493-1773-8. American Welding Society (2004). 1. ISBN 0-87171-726-3. The idea is to convert the percentage of alloying elements other than carbon to the equivalent carbon percentage, because the iron-carbon phases are better understood than other iron-alloy phases. The equivalent carbon

content concept is used on ferrous materials, typically steel and cast iron, to determine various properties of the alloy when more than just carbon is used as an alloyant, which is typical. Welding Procedure Specification Each company typically develops their own WPS for each material alloy and for each welding type used. Individual welders are certified with a qualification test documented in a Welder Qualification Test Record (WQTR) that shows. A WPS is supported by a Procedure Qualification Record (PQR or WPQR), a formal record of a test weld performed and rigorously tested to ensure that the procedure will produce a good weld. It is an internal document used by welding companies to instruct welders (or welding operators) on how to achieve quality production welds that meet all relevant code requirements. structures) AWS D1. Specific codes and/or engineering societies are often the driving force behind the development of a company's WPS.
