Industrial wastewater treatment Geochemistry, Geophysics, Geosystems.
Bibcode:2017GGG Industrial wastewater treatment describes the processes
used for treating wastewater that is produced by industries as an undesirable
by-product. 18 (7): 2467-2485. "Human-induced seismicity and large-
scale hydrocarbon production in the USA and Canada". Some industrial
facilities generate wastewater that can be treated in sewage treatment plants.
After treatment, the treated industrial wastewater (or effluent) may be reused

or released to a sanitary sewer or to a surface water in the environment. Most industrial processes, such as petroleum refineries, chemical and petrochemical plants have their own specialized facilities to treat their wastewaters so that the pollutant concentrations in the treated wastewater comply with the regulations regarding disposal of wastewaters into sewers or into rivers, lakes or oceans. This applies to industries that generate wastewater with high concentrations of organic

2016 Kaikōura earthquake for Strain Localization and Long-Term Evolution of the Pacific-Australian plate Boundary". It has been subsequently modelled as having a megathrust component set off by an adjacent rupture on the Humps Fault. It was the second largest earthquake in New Zealand since European settlement. 8 earthquake in the South Island of New Zealand that occurred two minutes after midnight on 14 November 2016 NZDT (11:02 on 13 November UTC). Geochemistry, Geophysics, Geosystems. 20 (3): 1609–1628. Bibcode:2019GGG The 2016 Kaikōura earthquake was a Mw 7. Ruptures

central mouth opening. Each polyp excretes an exoskeleton near the base. Over many generations, the colony thus creates a skeleton characteristic of the species which can measure up to several meters in size. Individual colonies grow by asexual reproduction of polyps. Landscape Combining both their physical origins and the cultural overlay of human presence, often created over millennia, landscapes reflect a living synthesis of people and place that is vital to local and national identity. territorial complexes (or geographic complexes, geosystems) as structural parts of the earth's geographic mantle" and states that "The basis of landscape science A landscape is the visible features of an area of land, its landforms, and how they integrate with natural or human-made features, often considered in terms of their aesthetic appeal. A landscape includes the physical elements of geophysically defined landforms such as mountains, hills, water bodies such as rivers, lakes, ponds and the sea, living elements of land cover including indigenous vegetation, human elements including different forms of land use, buildings, and structures, and transitory elements such as lighting and weather conditions

Laser rangefinder like construction, renovation and real estate as alternatives to tape measures, and was first introduced by Leica Geosystems in 1993 in

France. The most common form of laser rangefinder operates on the time of flight principle by sending a laser pulse in a narrow beam towards the object and measuring the time taken by the pulse to be reflected off the target and returned to the sender. Laser rangefinders are sometimes classified as type of handheld scannerless lidar. To measure A laser rangefinder, also known as a laser telemeter or laser distance meter, is a rangefinder that uses a laser beam to determine the distance to an object. Due to the high speed of light, this technique is not appropriate for high precision sub-millimeter measurements, where triangulation and other techniques are often used instead
