British Fascists William Joyce, Neil Francis Hawkins, Maxwell Knight and Arnold Leese were amongst those to have passed through the movement as members and activists. Joyce was typical of this sort of low-level member. The group had lacked much ideological unity apart from anti-socialism for most of its existence, and was strongly associated with British conservatism. This domination by disgruntled members of the peerage and high-ranking officers meant that certain The British Fascists (originally called the British Fascisti) were the first political organisation in the United Kingdom to claim the label of fascism, formed in 1923 1cd8d156d2

Effect of spaceflight on the human body Other significant effects include a slowing of cardiovascular system functions, decreased production of red blood cells (space anemia), balance disorders, eyesight disorders and changes in the immune system. Battersby, Stephen (21 March 2005). A 2024 assessment noted that "well-known problems include bone loss, heightened cancer risk, vision impairment, weakened. Significant adverse effects of long-term weightlessness include muscle atrophy and deterioration of the skeleton (spaceflight osteopenia). NASA. 10 June 2005. "Superflares could kill unprotected astronauts" The effects of spaceflight on the human body are complex and largely harmful over both short and long term. Additional symptoms include fluid redistribution (causing the "moon-face" appearance typical in pictures of astronauts experiencing weightlessness), loss of body mass, nasal congestion, sleep disturbance, and excess flatulence. storm". People trained for spaceflight are called astronauts (American or other), cosmonauts (Russian), or taikonauts (Chinese); and non-professionals are referred to as spaceflight participants or spacefarers. "Superflares could kill unprotected astronauts" Human spaceflight (also referred to as manned spaceflight or crewed spaceflight) is spaceflight with a crew or passengers aboard a spacecraft, often with the spacecraft being operated directly by the onboard human crew. Spacecraft can also be remotely operated from ground stations on Earth, or autonomously, without any direct human involvement. doi:10. Battersby, Stephen (21 March 2005)

Titan (moon) It is the second-largest moon in the Solar System after Jupiter's Ganymede and is larger than Mercury; yet Titan is only 40% as massive as Mercury, because Mercury is mainly iron and rock while much of Titan is mostly ice, which is less dense. Frequently described as a planet-like moon, Titan is 50% larger in diameter than Earth's Moon and 80% more massive. It is the only moon known to have an atmosphere denser than the Earth's atmosphere and is the only known object in space—other than Earth—on which there is clear evidence that stable bodies of liquid exist. Titan is one of seven gravitationally rounded moons of Saturn and the second-most distant among them. The same year, another study showed low levels of acetylene on Titan's surface, which Titan is

the largest moon of Saturn and the second-largest in the Solar System. effects McKay had predicted if methanogenic life-forms were present 1cd8d156d2

Saturn's interior is thought to be composed of a rocky core, surrounded by a deep layer of metallic hydrogen, an intermediate layer of liquid hydrogen and liquid helium, and an outer layer of gas. Saturn has a pale yellow hue, due to ammonia crystals in its upper atmosphere. An electrical current in the metallic hydrogen layer is thought to give rise... 1cd8d156d2
