SVSlope The software makes use of advanced searching methods to determine the critical failure surface. The software is designed to analyze slopes using both the classic "method of slices" as well as newer stress-based methods. The program is used in the field of civil engineering to analyze levees, earth dams, natural slopes, tailings dams, heap leach piles, waste rock piles, and anywhere there is concern for mass wasting. order to calculate the finite element stresses in a particular slope. SVSLOPE finds the factor of safety or the probability of failure for the slope. The user enters geometry, material properties, and analysis constraints (such as searching SVSLOPE is a slope stability analysis program developed by SoilVision Systems Ltd 8485fb3abd

Deal.II open-source library to solve partial differential equations using the finite element method. deal. 7, released in July 2025. H. Today, it is a worldwide project managed by around a dozen "Principal Developers"; over the years several hundred people have

contributed substantial pieces of code or documentation to the project. The current release is version 9. It is a free, open-source library to solve partial differential equations using the finite element method. The current release is version 9.11.7, released in July 2025. Wilkinson Prize for Numerical Software for deal. The founding authors of the project — Wolfgang Bangerth, Ralf Hartmann, and Guido Kanschat — won the 2007 J 8485fb3abd

Boundary element method in boundary integral form), including fluid mechanics, acoustics, electromagnetics (where the technique is known as method of moments or abbreviated as MoM), fracture mechanics, and contact mechanics. Analyst Boundary Element Analysis software Klompke, Bruce A Hybrid Magnetic Field Solver Using a Combined Finite Element/Boundary Element Field Solver, U The boundary element method (BEM) is a numerical computational method of solving linear partial differential equations which have been formulated as integral equations (i. e 8485fb3abd

Modal analysis In structural engineering, modal analysis uses the overall mass and stiffness Modal analysis is the study of the dynamic properties of systems in the frequency domain. Examples would include measuring the vibration of a car's body when it is attached to a shaker, or the noise pattern in a room when excited by a loudspeaker. also be used to

correlate with finite element analysis normal mode solutions. It consists of mechanically exciting a studied component in such a way to target the modeshapes of the structure, and recording the vibration data with a network of sensors

Hermes Project Hermes2D (Higher-order modular finite element system) is a C++/Python library of algorithms for rapid development of adaptive hp-FEM solvers. hp-FEM is Hermes2D (Higher-order modular finite element system) is a C++/Python library of algorithms for rapid development of adaptive hp-FEM solvers. hp-FEM is a modern version of the finite element method (FEM) that is capable of extremely fast, exponential convergence

Calculix The original software was written for the Linux operating system. CalculiX is a free and open-source finite-element analysis application that uses an input format similar to Abaqus. Convergent Mechanical has ported the application to the Windows operating system. It has an implicit and explicit solver (CCX) written by Guido Dhondt and a pre- and post-processor (CGX) written by Klaus Wittig. The pre-processor component of CalculiX can generate grid data for the computational fluid dynamics programs duns, ISAAC and OpenFOAM. It can also generate input data for the commercial FEM programs Nastran, Ansys and Abaqus. The pre-processor can also generate mesh data from STL files. 8485fb3abd

SVFlux The software is used for the calculation of flow rates, pore-water pressures, and pumping rates associated with regional groundwater flow. The software can be coupled with **CHEMFLUX** in order to calculate diffusion, advection, and decay rates or with **SVHEAT** in order to calculate thermal gradients and freeze/thaw fronts. The software is designed to analyze both saturated and unsaturated flow. **SVFLUX** is a finite element seepage analysis program developed by SoilVision Systems Ltd. The program is used in the fields of civil engineering and hydrology in order to analyze seepage and groundwater regional flow. **SVFLUX** is a finite element seepage analysis program developed by SoilVision Systems Ltd. The software is designed to analyze both saturated and unsaturated flow through the ground through the solving of Richard's equation.

VisualFEA It is widely used in college-level courses related to structural mechanics and finite element methods. Its strongest point is its intuitive, user-friendly design based on graphical pre- and postprocessing capabilities. It is used chiefly for structural and geotechnical analysis. **VisualFEA** is a finite element analysis software program for Microsoft Windows and Mac OS X. It is developed and distributed by Intuition Software, Inc. **VisualFEA** is a finite element analysis software program for Microsoft Windows and Mac OS X. It has educational features for teaching and learning structural mechanics, and finite element

analysis through graphical simulation. It is developed and distributed by Intuition Software, Inc 8485fb3abd

FEATool Multiphysics FEATool has been employed and used in academic research, teaching, and industrial engineering simulation contexts. FEATool Multiphysics features the ability to model fully coupled heat transfer, fluid dynamics, chemical engineering, structural mechanics, fluid-structure interaction (FSI), electromagnetics, as well as user-defined and custom PDE problems in 1D, 2D (axisymmetry), or 3D, all within a graphical user interface (GUI) or optionally as script files. FEATool Multiphysics ("Finite Element Analysis Toolbox for Multiphysics") is a physics, finite element analysis (FEA), and partial differential equation FEATool Multiphysics ("Finite Element Analysis Toolbox for Multiphysics") is a physics, finite element analysis (FEA), and partial differential equation (PDE) simulation toolbox 8485fb3abd
