after Ronald Fisher and Frank Yates, who first described it. It is also known as the
Knuth shuffle after Donald Knuth. A variant of the Fisher-Yates shuffle, known as

Structure. Smith, James (2023-04-02). Fisher, Ronald A. The algorithm takes a list of
all the elements of the sequence, and continually determines the next element in the
shuffled sequence by randomly drawing an element from the list until no elements
remain. The algorithm produces an unbiased permutation: every permutation is
equally likely. The modern version of the algorithm takes time proportional to the
number of items being shuffled and shuffles them in place. "Let's Do the
