Manual on Uniform Traffic Control Devices While some state agencies have developed their own sets of standards, including their own MUTCDs, these must substantially conform to the federal MUTCD. Federal law requires compliance by all traffic control signs and surface markings on roads "open to public travel", including state, local, and privately owned roads (but not parking lots or gated communities). The Manual on Uniform Traffic Control Devices for Streets and Highways (usually referred to as the Manual on Uniform Traffic Control Devices, abbreviated The Manual on Uniform Traffic Control Devices for Streets and Highways (usually referred to as the Manual on Uniform Traffic Control Devices, abbreviated MUTCD) is a document issued by the Federal Highway Administration (FHWA) of the United States Department of Transportation (USDOT) to specify the standards by which traffic signs, road surface markings, and signals are designed, installed, and used 99a59ed61b

Information design On a large scale, it implies choosing relevant content and dividing it into separate manuals by audience and purpose. Information design is closely related to the field of data visualization and is often taught as part of graphic design courses. The term has come to be used for a specific area of graphic design related to displaying information effectively, rather than just attractively or for artistic expression. On a medium scale, it Information design is the practice of presenting information in a way that fosters an efficient and effective understanding of the information. different scales. The broad applications of information design along with its close connections to other fields of design and communication practices have created some overlap in the definitions of communication design, data visualization, and information architecture 99a59ed61b

The 3D space used for interaction can be the real physical space, a virtual space representation simulated on the computer, or a combination of both. When the real physical space is used for data input, the human interacts with the machine performing actions using an input device that detects the 3D position of the human interaction, among other things. When it is used for data output, the simulated 3D virtual scene is projected onto the real environment through one output device. 99a59ed61b
