IBM System/360 of computer systems announced by IBM on April 7, 1964, and delivered between 1965 and 1978. The design distinguished between architecture and implementation, allowing IBM to release a suite of compatible designs at different prices. The System/360 family introduced IBM's Solid Logic Technology (SLT), which packed more transistors. System/360 was the first family of computers designed to cover both commercial and scientific applications and a complete range of sizes from small, entry-level machines to large mainframes. All but the only partially compatible Model 44 and the most expensive systems use microcode to implement the instruction set, which used 8-bit byte addressing with fixed-point binary, fixed-point decimal and hexadecimal floating-point calculations

Textual criticism Historically, scribes who were paid to copy documents may have been literate, but many were simply copyists, mimicking the shapes of letters without necessarily understanding what they meant. Intentional alterations may have been made as well, for example, the censoring of printed work for political, religious or cultural. Biblia Hebraica Stuttgartensia – 4th edition Hebrew Bible: A Critical Edition – an ongoing product which is designed to be different from Biblia Hebraica Textual criticism is a branch of textual scholarship, philology, and literary criticism that is concerned with the identification of textual variants, or different versions, of either manuscripts (mss) or of printed books. Such texts may range in dates from the earliest writing in cuneiform, impressed on clay, for example, to multiple unpublished versions of a 21st-century author's work. This means that unintentional alterations were common when copying manuscripts by hand

The earliest known video game Easter egg is in the 1973 video game Moonlander, in which the player tries to land a Lunar module on the Moon; if the player opts to fly the module horizontally through several of the game's screens, they encounter a McDonald's restaurant, and if they land next to it, the astronaut will visit it instead of standing next to the ship. The earliest known Easter egg in software in general is one placed...

Turing machine arbitrary computations, their minimalist design makes them too slow for computation in practice: real-world computers are based on different designs that, A Turing machine is a mathematical model of computation describing an abstract machine that manipulates symbols on a strip of tape according to a table of rules. Despite the model's simplicity, it is capable of implementing any computer algorithm

One goal of acoustical engineering can be the reduction of unwanted noise, which is referred to as noise control. Unwanted noise can have significant impacts on animal and human health and well-being, reduce attainment by students in schools, and cause hearing loss. Noise control principles are implemented into technology and design in a variety of ways, including control by redesigning sound sources, the design of noise barriers, sound absorbers, suppressors, and buffer zones, and the use... He is credited with inventing the first mechanical computer, the difference engine, that eventually led to more complex electronic designs, though all the essential ideas of modern computers are to be found in his analytical engine, programmed using a principle openly borrowed from the Jacquard loom. As part of his computer work, he also designed the first computer printers. He had a broad range of interests in addition to his work on computers, covered in his 1832 book Economy of Manufactures and Machinery... d1b7b8aa25

The machine operates on an infinite memory tape divided into discrete cells, each of which can hold a single symbol drawn from a finite set of symbols called the alphabet of the machine. It has a "head" that, at any point in the machine's operation, is positioned over one of these cells, and a "state" selected from a finite set of states. At each step of its operation, the head reads the symbol in its cell. Then, based on the symbol and the machine's own present state, the machine writes a symbol into the same cell, and moves the head one step to... d1b7b8aa25
