production by smallholders and individual farmers may promote conservation as palm trees become a source of regular household income that may economically be worth more than the value of timber sold.

Palm of the hand, the central region of the front of the hand

Mauritia flexuosa can reach up to 35 m (115 ft) in height. Henderson and McBride both give a height of 50 m (160 ft). The trunk can be up to 70 cm (28 in) diameter at breast height The large leaves form a rounded crown. The tree produces Pneumatophores which can develop as much as 30 metres (98 ft) from the trunk. suggesting a very extensive root system. The flowers are yellowish and appear from December to April. The fruit, which grows from December to June, is a chestnut color and is covered with shiny scales. The yellow...

Tree of life It is closely related to the concept of the sacred tree. The tree of the knowledge of good and evil and the tree of life which appear in Genesis' Garden of Eden as part of the Jewish cosmology of creation, and the tree of knowledge connecting to heaven and the underworld such as Yggdrasil, are forms of the world tree or cosmic tree, and are portrayed in various religions and philosophies as the same tree. The tree of the knowledge of good and evil and the tree of life which appear in Genesis's Garden of Eden as part of the Jewish The tree of life is a fundamental archetype in many of the world's mythological, religious, and philosophical traditions. concept of the sacred tree

Palm oil production in Indonesia 6 million metric tons (34,100,000 long tons; 38,100,000 short tons) of palm oil, and exported 25. A recent publication by the NGO Rainforest Action Network (RAN) indicates. There are a variety of health, environmental, and societal impacts that result from the production of palm oil in Indonesia. 1 million metric tons (24,700,000 long tons; 27,700,000 short tons) of it. Palm oil production is important to the economy of Indonesia as the country is the world's biggest producer and consumer of the commodity, providing about Palm oil production is important to the economy of Indonesia as the country is the world's biggest producer and consumer of the commodity, providing about half of the world's supply. There are several different types of plantations,

including small, privately owned plantations, and larger, state-owned plantations. In 2016, Indonesia produced over 34. Oil palm plantations stretch across at least 12 million hectares (30 million acres) afe1faaf87

Social and environmental impact of palm oil It is locally used as cooking oil, exported for use in much commercial food and personal care products and is converted into biofuel. It Palm oil, produced from the oil palm, is a basic source of income for many farmers in South East Asia, Central and West Africa, and Central America. It produces up to 10 times more oil per unit area than soybeans, rapeseed or sunflowers. Palm oil, produced from the oil palm, is a basic source of income for many farmers in South East Asia, Central and West Africa, and Central America afe1faaf87

Palms are among the best known and most extensively cultivated... afe1faaf87 Several other plants known as "palm" afe1faaf87 Oil palms produce 38% of the world's vegetable-oil output on 6% of the world's vegetable-oil farmland. Palm oil plantations, typically monoculture crops are under increasing scrutiny for their effects on the environment, including loss of carbon-sequestering, biodiverse forest land. There is also concern over displacement and disruption of human and animal populations due to palm oil cultivation. afe1faaf87

Palm wine It is known by various names in different regions and is common in various parts of Africa, the Caribbean, South America, South Asia, Southeast Asia, and Micronesia. Palm wine, known by several local names, is an alcoholic beverage created from the sap of various species of palm trees such as the palmyra, date palms Palm wine, known by several local names, is an alcoholic beverage created from the sap of various species of palm trees such as the palmyra, date palms, and coconut palms afe1faaf87

It is native to west and southwest Africa, specifically the area between Angola and The Gambia; the species name, guineensis, refers to the name for the area called Guinea, and not the modern country Guinea now bearing that name. The species is also now naturalised in Madagascar, Sri Lanka, Malaysia, Indonesia, Central America, Cambodia, the West Indies, and several islands in the Indian and Pacific Oceans. The closely related American oil palm *E. oleifera* and a more distantly related palm, *Attalea maripa*, are also used to produce palm oil. afe1faaf87

Elaeis guineensis *Elaeis guineensis* is a species of palm commonly just called oil palm but also sometimes African oil palm or macaw-fat. The first Western person to describe *Elaeis guineensis* is a species of palm

commonly just called oil palm but also sometimes African oil palm or macaw-fat. The first Western person to describe it and bring back seeds was the French naturalist Michel Adanson

Arecaceae Their growth form can be climbers, shrubs, tree-like and stemless plants, all commonly known as palms. However, palms exhibit an enormous diversity in physical characteristics and inhabit nearly every type of habitat within their range, from rainforests to deserts. Most palms are distinguished by their large, compound, evergreen leaves, known as fronds, arranged at the top of an unbranched stem, except for the *Hyphaene* genus, who has branched palms. Currently, 181 genera with around 2,600 species are known, most of which are a family of perennial, flowering plants in the monocot order *Arecales*. Those having a tree-like form are colloquially called palm trees. Currently, 181 genera with around 2,600 species are known, most of which are restricted to tropical and subtropical climates. Those having a tree-like form are colloquially called palm trees

Elaeis *Elaeis* (from Greek 'oil') is a genus of palms, called oil palms, containing two species, native to Africa and the Americas. They are used in commercial agriculture in the production of palm oil

Palm oil The oil is used in food manufacturing, in beauty products, and as biofuel. Palm oil accounted for about 36% of global oils produced from oil crops in 2014. Palm oils are easier to stabilize and maintain quality of flavor and consistency in ultra-processed foods, so they are frequently favored by food manufacturers. Palm oil is an edible vegetable oil derived from the mesocarp (reddish pulp) of the fruit of oil palms. Demand has also increased for other uses, such as cosmetics and biofuels, encouraging the growth of palm oil plantations in tropical countries. 7 kg (17 lb) of palm oil per person in 2015. Globally, humans consumed an average of 7. The oil is used in food manufacturing, in beauty Palm oil is an edible vegetable oil derived from the mesocarp (reddish pulp) of the fruit of oil palms

The mass production of palm oil in the tropics has attracted the concern of environmental and human rights groups. The palm oil industry is a significant...
