Financial audit called Argus, which reads and scans documents to identify key contract terms and other outliers within the documents. In providing an opinion whether financial statements are fairly stated in accordance with accounting standards, the auditor gathers evidence to determine whether the statements contain material errors or other misstatements. Normally, the criteria are international accounting standards, although auditors may conduct audits of financial statements prepared using the cash basis or some other basis of accounting appropriate for the organization. PWC uses Halo, which is another machine A financial audit is conducted to provide an opinion whether "financial statements" (the information is verified to the extent of reasonable assurance granted) are stated in accordance with specified criteria.

Abstract factory pattern According to this pattern, a client software component creates a concrete implementation of the abstract factory and then uses the generic interface of the factory to create the concrete objects that are part of the family. created from the same DocumentCreator implementation and would share a common theme. This pattern separates the details of implementation of a set of objects from their general usage and relies on object composition. The client does not know which concrete objects it receives from each of these internal factories, as it uses only the generic interfaces of their
