

Harbor Breeze Ceiling Fan Manual

Village pumps < 8 December Centralized discussion

Ceiling fan They cool people effectively by increasing air speed. Fans use significantly less power than air conditioning as cooling air is thermodynamically expensive. A ceiling fan is a fan mounted on the ceiling of a room or space, usually electrically powered, that uses hub-mounted rotating blades to circulate air A ceiling fan is a fan mounted on the ceiling of a room or space, usually electrically powered, that uses hub-mounted rotating blades to circulate air. Fans add a small amount of heat to the room mainly due to waste heat from the motor, and partially due to friction. Fans do not reduce air temperature or relative humidity, unlike air-conditioning equipment, but create a cooling effect by helping to evaporate sweat and increase heat exchange via convection. In the winter, fans move warmer air, which naturally rises, back down to occupants. This can affect both thermostat readings and occupants' comfort, thereby improving the energy efficiency
