Railway track Innovative Infrastructure Solutions. (2016). 1 (1): 15. It enables trains to move by providing a dependable, low-friction surface on which steel wheels can roll. Bibcode:2016InnIS Railway track (CwthE and UIC terminology) or railroad track (NAmeE), also known as permanent way (per way) (CwthE) or "P way" (BrE and Indian English), is the structure on a railway or railroad consisting of the rails, fasteners, sleepers (railroad ties in American English) and ballast (or slab track), plus the underlying subgrade. Das, Braja M. Retrieved 29 June 2022. Early tracks were constructed with wooden or cast-iron rails, and wooden or stone sleepers. Since the 1870s, rails have almost universally been made from steel. Each discipline involves specialties, many of which are recognized through professional designations that governments and societies or associations confer based upon... geomatics engineering other geoprofessional services.

Geoprofessions England: THOMSON LEARNING "Geoprofessions" is a term coined by the Geoprofessional Business Association to connote various technical disciplines that involve engineering, earth and environmental services applied to below-ground ("subsurface"), ground-surface, and ground-surface-connected conditions, structures, or formations. CRC Press, ISBN 0-8493-0068-1 Das, Braja M. (2003) Earthquake Engineering Handbook. The principal disciplines include, as major categories:. (2006) Principles of Geotechnical Engineering

geophysics; environmental science and environmental engineering; geological engineering; geology and engineering geology; geotechnical engineering; Geotechnical engineering has applications in military engineering, mining engineering, petroleum engineering, coastal engineering, and offshore construction. The fields of geotechnical engineering and engineering geology have overlapping knowledge areas. However, while geotechnical engineering is a specialty of civil engineering, engineering geology is a specialty of geology.

Geotechnical engineering It Geotechnical engineering, also known as

geotechnics, is the branch of civil engineering concerned with the engineering behavior of earth materials. It uses the principles of soil mechanics and rock mechanics to solve its engineering problems. It also relies on knowledge of geology, hydrology, geophysics, and other related sciences.
