Android fat distribution Generally, during early adulthood, females tend to have a more peripheral fat distribution, so that their fat is evenly distributed over their body. However, it has been found that as females age, bear children and approach menopause, this distribution shifts towards the android pattern of fat distribution. In other cases, an ovoid shape forms, which does not differentiate between men and women. Thus, the android fat distribution of men is about 48. 6%, which is 10. 3% higher than that of premenopausal women. This pattern may lead to a "triangle"-shaped body or central obesity, and is more common in males than in females.
