Many compressors can be staged, that is, the gas is compressed several times in steps or stages, to increase discharge pressure. Often, the second stage is physically smaller than the primary stage, to accommodate the already compressed gas without reducing its pressure. Each stage further compresses the gas and increases its pressure and also temperature (if inter cooling between stages is not used). 590588f5a2 Small air handlers, for local use, are called terminal units, and may only include an air filter, coil, and blower; these simple terminal units... 590588f5a2

Air conditioning Air conditioning can be achieved using a mechanical 'air conditioner' or through other methods, such as passive cooling and ventilative cooling. Air conditioning is a member of a family of systems and techniques that provide heating, ventilation, and air conditioning (HVAC). Heat pumps are similar in many ways to air conditioners but use a reversing valve, allowing them to both heat and cool an enclosed space. controlling the humidity of internal air. Air conditioning can be achieved using a mechanical "air conditioner" or through other methods, such as passive Air conditioning, often abbreviated as A/C (US) or air con (UK), is the process of removing heat from an enclosed space to achieve a more comfortable interior temperature and, in some cases, controlling the humidity of internal air 590588f5a2

Air handler ISBN 9781933742335. An air handler, or air handling unit (often abbreviated to AHU), is a device used to regulate and circulate air as part of a heating, ventilating, and air-conditioning (HVAC) system. Sometimes AHUs discharge (supply) and admit (return) air directly to and from the space served without ductwork.). of Heating, Refrigerating and Air-Conditioning Engineers. Carrier Design Manual part 2: Air Distribution (1974 tenth ed. 2008. An air handler is usually a large metal box containing a blower, furnace or A/C elements, filter racks or chambers, sound attenuators, and dampers. Air handlers usually connect to a ductwork ventilation system that distributes the conditioned air through the building and returns it to the AHU, sometimes exhausting air to the atmosphere and bringing in fresh air 590588f5a2
