Internet of things "Internet of things" has been considered a misnomer because devices do not need to be connected to the public internet; they only need to be connected to a network and be individually addressable. These devices allow for remote control by users, or central management via a cloud-based interface, and enable Internet of things (IoT) describes devices with sensors, processing ability, software and other technologies that connect and exchange data with other devices and systems over the Internet or other communication networks. optimize the energy consumption as a whole. The IoT encompasses electronics, communication, and computer science engineering 0b78ce2feb

Human-computer interaction Research in HCI covers the design and the use of computer technology, which focuses on the interfaces between people (users) and computers. HCI researchers observe the ways humans interact with computers Human-computer interaction (HCI) is the process through which people operate and

engage with computer systems. computer technology, which focuses on the interfaces between people (users) and computers. HCI researchers observe the ways humans interact with computers and design technologies that allow humans to interact with computers in novel ways. These include visual, auditory, and tactile (haptic) feedback systems, which serve as channels for interaction in both traditional interfaces and mobile computing contexts

This is a bot-compiled listing of journals cited by Wikipedia, organized by their current publishers (or sometimes by their host repository). Due to imperfect matching algorithms, the list may feature publications and publishers which...

Human-robot interaction sensing Anthropomorphism and the uncanny valley Bartneck and Okada suggest that a robotic user interface can be described by the following four properties: Human-robot interaction (HRI) is the study of interactions between humans and robots. A subfield known as physical human-robot interaction (pHRI) has tended to focus on device design to enable people to safely interact with robotic systems. Human-robot interaction is a multidisciplinary field with contributions from human-computer interaction, artificial intelligence, robotics, natural language processing, design, psychology and philosophy 0b78ce2feb
