The laws of physics are invariant (identical) in all inertial frames of reference (that is, frames of reference with no acceleration). This is known as the principle of relativity. $\square$ "Mathematical analysis",

Exponentiation 7-8 In mathematics, exponentiation, denoted b^n , is an operation involving two numbers: the base, b , and the exponent or power, n . ; Thomas, George B. When n is a positive integer, exponentiation corresponds to repeated multiplication of the base: that is, b^n is the product of multiplying n bases: $b \cdot b \cdot \dots \cdot b$. The first postulate was first formulated by Galileo Galilei (see Galilean invariance).

$b^n = \underbrace{b \times b \times \dots \times b}_n$ The speed of light in vacuum is the same for all observers, regardless of the motion of light source or observer. This is known as the principle of light constancy, or the principle of light speed invariance.
