

Resorcinol Chemistry Technology And Applications 1st Edition

Phenol was first extracted from coal tar, but today is produced on a large scale (about 7 million tonnes a year) from petroleum-derived feedstocks. It is an important industrial commodity as a precursor to many materials and useful compounds, and is a liquid when manufactured. It is primarily used to synthesize plastics and related materials. Phenol and its chemical derivatives are... 0434b3dbc1

Supercapacitors are used in... 0434b3dbc1 Unlike ordinary capacitors, supercapacitors do not use a conventional solid dielectric, but rather, they use electrostatic double-layer capacitance and electrochemical pseudocapacitance, both of which contribute to the total energy storage of the capacitor. 0434b3dbc1

Supercapacitor It bridges the gap between electrolytic capacitors and rechargeable batteries. It typically stores 10 to 100 times more energy per unit mass or energy per unit volume than electrolytic capacitors, can accept and deliver charge much faster than batteries, and tolerates many more charge and discharge cycles than rechargeable batteries. They enable thin and mechanically stable electrodes A supercapacitor (SC), also called an ultracapacitor, is a high-capacity capacitor, with a capacitance value much higher than solid-state capacitors but with lower voltage limits. made via pyrolysis of resorcinol-formaldehyde aerogels and are more conductive than most activated carbons 0434b3dbc1

BPA's largest single application is as a co-monomer in the production of polycarbonates, which accounts for 65–70% of all BPA production. The manufacturing of epoxy resins and vinyl ester resins account for 25–30% of BPA use. The remaining 5% is used as a major component of several high-performance plastics, and as a minor additive in polyvinyl chloride (PVC), polyurethane, thermal paper, and several other materials... 0434b3dbc1 The molecule consists of a phenyl group (–C6H5) bonded to a hydroxy group (–OH). Mildly acidic, it requires careful handling because it can cause chemical burns. It is acutely toxic and is considered a health hazard. 0434b3dbc1

Bisphenol A "Flame retardancy mechanisms of triphenyl phosphate, resorcinol bis(diphenyl phosphate) and bisphenol A bis(diphenyl phosphate) in Bisphenol A (BPA) is a chemical compound primarily used in the manufacturing of various plastics. Global production in 2022 was estimated to be in the region of 10 million tonnes. 2007). It is a colourless solid which is soluble in most common organic solvents, but has very poor solubility in water. BPA is produced on an industrial scale by the condensation reaction of phenol and acetone 0434b3dbc1

Wikipedia:Peer review/May 2008 DONE Semi automated peer review has some useful ideas. If one of your requests has been moved here by mistake, please accept our apologies and undo the archiving edit to the peer review page for the article. Also good to try and find a model Good This page contains the Peer review requests that are older than one month, have received no response in the last two weeks, are not signed, have become featured article or featured list candidates, or did not follow the "How to use this page" principles in some way. link this from Resorcinol as it is the active ingredient 0434b3dbc1

Phenol Phenoxides Phenol (also known as carboic acid, phenolic acid, or benzenol) is an aromatic organic compound with the molecular formula C6H5OH. It is a white crystalline solid that is volatile and can catch fire. tautomer: (a) additional hydroxy groups (see resorcinol) (b) annulation as in the formation of naphthols, and (c) deprotonation to give the phenolate 0434b3dbc1
