Latent semantic analysis questions MCQ answering model. Expand the feature space of machine learning / text mining systems Analyze word association in text corpus Synonymy and polysemy Latent semantic analysis (LSA) is a technique in natural language processing, in particular distributional semantics, of analyzing relationships between a set of documents and the terms they contain by producing a set of concepts related to the documents and terms. A matrix containing word counts per document (rows represent unique words and columns represent each document) is constructed from a large piece of text and a mathematical technique called singular value decomposition (SVD) is used to reduce the number of rows while preserving the similarity structure among columns. Values close to 1 represent. Documents are then compared by cosine similarity between any two columns. LSA assumes that words that are close in meaning will occur in similar pieces of text (the distributional hypothesis) 8f7bb65c55
