Wikipedia:Language learning centre/Word list skylights skyline skylines
skyscape skyscraper skyscrapers skyward skywards slab slabs slack slacked
slacken slackened slackening slackens slacker slackers slackest Drawing up
a comprehensive list of words in English is important as a reference when
learning a language as it will show the equivalent words you need to learn in
the other language to achieve fluency. A big list will constantly show you
what words you don't know and what you need to work on and is useful for
testing yourself. Eventually these words will all be translated into big lists in
many different languages and using the words in phrase contexts as a
resource. You can use the list to generate your own lists in whatever
language you're learning and to test yourself 1c89fda032

Duck and cover strength and density, with many of the columns, beams, and
slabs underdesigned and improperly reinforced. These facts account for
some of the structural failures "Duck and cover" is a method of personal
protection against the effects of a nuclear explosion. Ducking and covering is
useful in offering a degree of protection to personnel located outside the
radius of the nuclear fireball but still within sufficient range of the nuclear
explosion that standing upright and uncovered is likely to cause serious
injury or death. In the most literal interpretation, the focus of the maneuver
is primarily on protective actions one can take during the first few crucial
seconds-to-minutes after the event, while the film of the same name and a
full encompassing of the advice also cater to providing protection up to
weeks after the event 1c89fda032

Nuclear bunker buster mass of material from the opposite face of a plate or slab subjected to an impact or impulsive loading, without necessarily requiring that the barrier itself A nuclear bunker buster, also known as an earth-penetrating weapon (EPW), is the nuclear equivalent of the conventional bunker buster. However, it is unlikely that the explosion would be completely contained underground. An underground explosion releases a larger fraction of its energy into the ground, compared to a surface burst or air burst explosion at or above the surface, and so can destroy an underground target using a lower explosive yield. As a result, significant. The non-nuclear component of the weapon is designed to penetrate soil, rock, or concrete to deliver a nuclear warhead to an underground target. These weapons would be used to destroy hardened, underground military bunkers or other below-ground facilities. This in turn could lead to a reduced amount of radioactive fallout 1c89fda032
