

Case Studies In Abnormal Psychology

8th Edition

Explaining the mental processes of personality and how they affect functioning
5a599b6256

Developmental psychology Developmental psychologists aim to explain how thinking, feeling, and behaviors change throughout life. This field examines change across three major dimensions, which are physical development, cognitive development, and social emotional development. Originally concerned with infants and children, the field has expanded to include adolescence, adult development, aging, and the entire lifespan. Within these three dimensions are a broad range of topics including motor skills, executive functions, moral understanding, language acquisition, social change, personality, emotional development, self-concept, and identity formation. While research in

developmental psychology has certain limitations, ongoing studies aim to understand how life stage transitions Developmental psychology is the scientific study of how and why humans grow, change, and adapt across the course of their lives. dynamic systems of development 5a599b6256
