Dimensional analysis 8 Dimensions In engineering and science, dimensional analysis is the analysis of the relationships between different physical quantities by identifying their base quantities (such as length, mass, time, and electric current) and units of measurement (such as metres and grams) and tracking these dimensions as calculations or comparisons are performed. Introduction, Measurement, Estimating §1. Identification of Mathematical Models, World Scientific, ISBN 978-981-02-0304-7 Giancoli, Douglas C. The term dimensional analysis is also used to refer to conversion of units from one dimensional unit to another, which can be used to evaluate scientific formulae. (2014). "1 b7bc9ca49d

Commensurable physical quantities are of the same kind and have the same dimension, and can be directly compared to each other, even if they are expressed in differing units of measurement; e.g., metres and feet, grams and pounds, seconds and years. Incommensurable physical quantities are of different... b7bc9ca49d
