History of construction fields including structural engineering, civil engineering, city growth and population growth, which are relatives to branches of technology, science, history The history of construction traces the changes in building tools, methods, techniques and systems used in the field of construction. It explains the evolution of how humans created shelter and other structures that comprises the entire built environment. It covers several fields including structural engineering, civil engineering, city growth and population growth, which are relatives to branches of technology, science, history, and architecture. The fields allow both modern and ancient construction to be analyzed, as well as the structures, building materials, and tools used

Kaolinite It is a layered silicate mineral, with one "tetrahedral" sheet of silicate tetrahedrons (SiO₄) linked to one "octahedral" sheet of aluminate octahedrons (AlO₂(OH)₄) through oxygen atoms on one side, and another such sheet through hydrogen bonds on the other side. 8% of the total Kaolinite (KAY-ə-lə-nyte, -lih-; also called kaolin) is a clay mineral, with the chemical composition Al₂Si₂O₅(OH)₄. utilization of kaolinite in geotechnical engineering can be alternatively replaced by safer illite, especially if its presence is less than 10 75e797d9a4
