Dual-clutch transmission ZF Friedrichshafen AG. com. Archived A dual-clutch transmission (DCT) (sometimes referred to as a twin-clutch

transmission) is a type of multi-speed vehicle transmission system, that uses two separate clutches for odd and even gear sets. The design is often similar to two separate manual transmissions with their respective clutches contained within one housing, and working as one unit. In car and truck applications, the DCT functions as an automatic transmission, requiring no driver input to change gears. Many early versions of these transmissions that are semi-automatic in operation, such as Autostick, which automatically control only the clutch – often using various forms of clutch actuation, such as electro-mechanical, hydraulic, pneumatic, or vacuum actuation – but still require the driver's manual input and full control to initiate gear changes by hand. These systems that require manual shifting are also referred to as clutchless manual systems. Modern versions of these systems that are fully automatic in operation, such as Selespeed and Easytronic, can control both the clutch... 8ba593d107 Its principal competitor is the Zyle Daewoo Bus FX series, and BX212 and Kia Granbird. 8ba593d107 The proportion of chassis components using aluminium significantly increased for the E39, and it was the first 5 Series to use aluminium for all major
